## PREFACE

History always recalls National Census as one of the greatest achievements of any ruler who accomplishes it, precisely because it presupposes vision, systematic planning and sincere dream for sustainable development of his or her kingdom.

2012 was a milestone in the annals of the Latin Archdiocese of Trivandrum which celebrated its Platinum Jubilee that year. One of the important events which added colour and grandeur and substance was the socio-economic, pastoral and civic survey of the Archdiocesan population. Though the diocese was not new to such surveys, the present one was special with its coverage and depth. It was this bold decision and constant encouragement of Archbishop Soosa Pakiam that enabled us to fulfill such a satisfying, though hard and challenging, task with commendable output.

Preliminary discussions of the survey began in the beginning of 2011. There were many who enriched us to shape the survey format with solid support. The following ones deserve special mention of thanks: Fr. E.J. Thomas S J, Fr. Joye James S J, Dr. Irudayaraj, Dr. Charles Leon, Dr. Biju and Msgr. Eugine H. Pereira. It was also placed before the Diocesan Senate and other relevant Archdiocesan platforms, besides the directors of different ministries in the Archdiocese. A sample survey was carried out at Kochuthura, Nettayam and Thope during February - March, 2011. The format for data collection was presented in the Presbyterium held on 23rd August, 2011 along with the sample survey results. Suggestions were incorporated therein.

A Training of Trainers (ToT) was organized at the diocesan level on July 17th and 23rd 2011, for personnel such as the parish BCC coordinators, animators of various ministries and other parish representatives on the methodology of enumeration. They functioned as a resource team for training the enumerators at the villages. By the end of July, parish level training was completed. The field level survey was completed in five months starting from the month of August 2011. Some 2050 people were involved in the enumeration. From September 2011 onwards parishes began sending the completed survey forms. The commendable efforts of the parish priests, parish councils and other teams deserve a word of appreciation and thanks. Meanwhile, a new software was developed on VB. Net with Mysql for data entry and report generation. It is flexible enough to generate any combination of options. This parish/user-friendly software would not have been materialized but for the hard work and skills of Adv. Justus who deserves special thanks and it is joyfully recorded here.
Data entry which begun in November 2011 took almost eight months to complete. 39 people at different locations and times committed themselves to make it a reality. Though the names of all the members involved in the data entry are impossible to be mentioned here, the names of Mrs. Dayana, Mrs. Mercy, Miss. Jimmy Mole, Mr. Nandu, Mr. Sumesh, Bros. Ajith, Shijin, Immanuel, Marthoma and Lawrence can not go without mentioning. Their committed efforts are thankfully remembered here. Sr. Mary Vaz, the BCC office secretary, along with the animators and staff of BCC made all efforts needed to coordinate the entire process of data collection and entry. They together do deserve gracious thanks.

On 1st July 2013, the day of the Platinum Jubilee celebration, we could release the forane-wise family directory before the public which represented the source of this data base. After clearing errors the final data and its results were presented in the Presbytarium on 14th August, 2012 and priests were introduced to the use of the software. This introduction was given for the parish - forane representatives also.

The complete data were then handed over in November 2012 to ADHWANA, a State Level professional NGO, in order to bring out the report of the survey with the findings and recommendations. The volume in your hands with lot of information in tables and charts, along with analysis, findings and recommendations generated from the
supplied data is the result of sustained hard work of Dr. J. Mary John and his team of experts and staff. A big thanks to them. A special word of appreciation and thanks is due to SKETCH TRICKS for accomplishing the designing and printing works beautifully. We thankfully acknowledge the contributions of Fr. Stansilaus in drafting a brief outline of the forane background of Thoothoor. We are indeed indebted to the Fr. Lenin Raj, the Secretary and Director, Trivandrum Social Service Society and to his staff in extending all possible supports throughout the process of survey, besides the financial assistance to carry out this task constraint- free.

Archdiocesan Synod, one of the great events of the Platinum Jubilee, discussed and suggested plans on various sectors and fields of activities. Further planning in detail, taking into account the ground realities of the parish communities needs to be done, yet. The plan will be SMART plan: Specific, Measurable, Achievable, Realistic and Time-bound. The survey and the report generated certainly will have its impact on that. The Report may serve as a historical data on our diocesan community and can form basis of comparison for future social analysis and planning, whenever necessary.

However, the findings of this survey shall better be used with constant and serious inputs from people's active participation at all levels of interventions- parish, forane and Archdiocesan. It is our modest expectation that it forms the basis for future planning.

We, the members of the Survey Team, take this opportunity to thank you, one and all for your share in making this a reality for the service of our valiant people who dare even the elements for sustenance and survival.

## Survey Coordination Team

## FOREWORD

"To know thyself is the greatest knowledge". The aims of "Latin Archdiocesan survey 2011" are: to know our Archdiocese in a better way; to know our strengths and weaknesses; to know the exact population; to situate ourselves with other communities; to find the areas of our development; to focus our ministries to the real needs of people. This is an eye opener to all members of our Archdiocese. The survey results reveal what we are and where we are today after 75 years of journey as a faith community rooted in Jesus and his principles.
"Latin Archdiocesan survey 2011" attempts also a study of each individual family and person in our Archdiocese. This effort taken in view of reaching substantiated inferences about our community has now reached to the present stage through expert guidance, participatory and collective action and thought, group discussions, well designed interview schedule, effective training sessions, tedious home- to- home data collection, tailor-made software preparation, patient data entry and intelligent data analysis-interpretation and high standard of organizing various factors.

This survey reports are arranged in two levels, namely Archdiocese-Forane level and Forane-Parish level. This is a very helpful tool for the decentralized planning in our Archdiocese which is a key principle of our first synod. Different ministries and commissions have to make use of this survey analysis for their entire planning of the ministry and could reflect in the annual plan and budget at least for the next 5 years. The forane which has regional preferences and priorities should make use of these survey findings for their long and short term planning of various ministries and concerns they face. As pastors and leaders of the community, they should make use of these results and analysis for their parish ministry. The parish councils, finance councils and other bodies in the parishes have to see their priorities and levels of different areas and should make efforts to improve them by planning and executing different programs for the target groups.

I sincerely appreciate this great task and all the persons who toiled to make this dream a reality. We are on our way to an improved situation not only in terms of our socio-economic progress but also in terms of our skills to understand the reality.

I love to state here that undertaking such an exercise should not be stopped with this one. At the completion of every tenth year, a similar exercise has a more relevant space in the process of updating the information. I once again appreciate each and every one behind this great achievement.

## PARISHES IN THOOTHOOR FORANE <br> Latin Archdiocese of Trivandrum

## THIRUVANANTHAPURAM LATIN ARCHDIOCESE. HISTORICAL BACKGROUND

## Introduction

Christianity claims its presence in Kerala since the $1^{\text {st }}$ century itself. Its inception was supposed to be by 52 AD with the arrival of St. Thomas, the Apostle, in this land. However, a historical study of Christian community in Kerala forgetting the services of foreign missionaries, who sacrificed their lives to promote social justice among the people of this land, who were suppressed and depressed under the then prevailing untouchability and colour discriminations, may perhaps be incomplete.

## Origin of Christian Community

In the past, Quilon was a prominent and predominant commercial centre of Travancore. Even before the merchants from western countries came to Travancore for their trade and commerce, the missionaries from Europe visited Travancore to propagate the Good News of Jesus, the Christ. Marcopolo, a famous traveler from Venice, who visited Quilon in the year 1292 AD has engrossed that there was a Christian community in this land. The seeds of faith, sown by the Franciscans and Dominicans, which were confirmed and strengthened by St. Francis Xavier, the Jesuit, and his followers, resulted in the formation of Christian communities along the coastal area of the erstwhile Travancore.

Pope John XXII, by a Decree "ROMANUS PONTIFIX" established the Diocese of Quilon in the year 1329, which became the first diocese in India. The writings of St. Francis Xavier mentions places such as Vizhinjam, Karumkulam, Puthiyathura, Pulluvila, Kollamcode, Vallavila, Thoothoor, Puthenthura, Thengappattanam, Inayam, Midalam, Vaniyakkudi, Kulachal, Kadiyappattanam, Muttom, Pallom, Manakkudi. The areas from Kulachal in the south to Adimalathura in the north were under a vicariate as recorded by Fr. Valithano, a Jesuit Missionary. There are evidences that Christian communities were existing at Mampally and Roitora even prior to the arrival of Francis Xavier.

## Formation of Trivandrum Latin Diocese

By $17^{\text {th }}$ century the Carmelite Missionaries landed in India. In 1898 , when Rt. Rev. Dr. Aloysious Maria Benziger was the Bishop of Kollam, the Carmelite Missionaries from Belgium resorted at Travancore and concentrated on mission works. Their mission area covered the present dioceses of Kollam, Punalur, Thiruvananthapuram, Neyyatinkara and Kottar which were part of the Diocese of Kollam. In 1930 Kottar diocese came into existence. In 1937 Pope Pious XI by a Decree "IN ORA MALABARICA" established the Trivandrum Latin Diocese by bifurcating the Kollam Diocese. The revenue Taluks of Chirayinkeezh, Thiruvananthapuram, Nedumangad and Neyyattinkara were placed under the jurisdiction of Trivandrum diocese. In 1952 the coastal parishes from Pallithura to Erayimmanthura were de-linked from Cochin Diocese and attached to the Diocese of Trivandrum.

## Bishops on Service

On formation of Trivandrum Diocese Rt. Rev. Dr. Vincent Dereira, the then Bishop of Kollam was appointed as the

#### Abstract

$1^{\text {st }}$ Bishop of Trivandrum Diocese. During his tenure the catholic population in the diocese increased to around three Lakhs and in the educational sector there were 63 primary schools, 28 U.P schools, 15 High Schools, 2 Training schools and 3 Colleges. Rt. Rev. Dr. Peter Bernard Pereira, who followed Bishop Vincent Dereira was the first Bishop from the soil and his tenure was from October 1966 to June 1978. Bishop Pereria lighted the lamp for many social developmental activities in the diocese. One of such is Marianad Community Development Programme. Trivandrum Social Service Society, a registered social service society is a pioneering initiative of Bishop Pereira. The Indian Space Research Organisation at Thumba was made possible because of the visionary intervention of Bishop Pereira. It was during his time that the land base for the future development of Trivandrum diocese was created.

Bishop Peter Bernard Pereira was succeeded by Bishop Jacob Archaruparambil OFM Cap, who was in service from October 1979 to 1990. It was during his period that the historical event of Kottar Living Together took place in the Golden Jubilee year of the diocese which gave new outlook to the diocese as a Participatory Church and the Church as the People of God by inculcating the vision of II Vatican Council. In the year 1990 Bishop Soosa Pakiam took charge of the diocese. Tremendous achievements both in the spiritual as well as social arenas have been made in the diocese during the past 23 years. Decentralization and participation were the basic principles adopted in every stage of administration in the Local Church.

## Bifurcation of the Diocese and Elevation as Archdiocese

In 1996 Trivandrum diocese was bifurcated and a new diocese came into being - Neyyatinkara Diocese. Thus the area of Thiruvananthapuram diocese was reduced to 686 sq. k.m. which encompassed the areas from Ayiroor of Chirayinkeezh Taluk in the north to Erayummanthurai of Vilavancode Taluk of Kanyakumari Dist in the south. A major portion of Trivandrum diocese is located along the coastal belt with six foranes, which extends to about 76 k.m in lenth. There are two foranes in the interior.

In the year 2004 Pope John Paul II was pleased to elevate Trivandrum diocese as an Archdiocese with Alappuzha, Kollam, Punalur and Neyyatinkara as its suffragent dioceses. Bishop Soosa Pakiam was elevated as the Archbishop of this ecclesiastical region.

## Renewal Process in the Diocese

The general observation is that the socio-economic, educational and political situation of the people of our diocese is not very impressive and the available statistics shows that they are far behind many of the other communities in Kerala. Diocese has adopted many strategies over the years to lift the community to the mainstream according to the need of the time. Especially community building that took place after the 'Kottar Living Together' and the structural and functional changes evolved in the diocese have contributed much to its growth.
There are several parishes (80) and sub-stations (43) working as the arms of the Archdiocese to implement, inter alia, the socio-economic-pastoral and educational activities with the people. Basic Christian Communities (BCCs) have been formed in all the parishes and sub- stations in order to enhance and sustain the active participation of the people and decentralization of the ministries. Pastoral ministry touches the pastoral and spiritual life of the people through the commissions of Bible, Catechism, Liturgy, Family Apostolate, Evangalization, Ecumenism and Dialogue.
In the educational sector there are 5 Higher Secondary Schools, 2 High Schools, 4 U.P Schools, 17 L.P Schools, 1 CBSC School and one Centre for Excellence, one Engineering College, one Nursing College, one ITC and one B.Ed College under the Archdiocesan management. Other than this there are 19 schools under the direct control of parish managements and 25 schools under the management of the religious and 4 schools under the Trusts of Latin Catholic lay people.

Social action ministry steered by Trivandrum Social Service Society has five departments such as (1) Capacity building, (2) Advocacy, Policy Lobbying and Net-working, (3) Socio-economic development and employment, (4) Health, environment and education and (5) Administration and Research. The activities are carried out through
various community based-organizations (forums) and institutions. There are 6 forums and 11 institutions under Social Action Ministry taking care of various target groups.

Other relevant activities of the Archdiocese are carried out through the Board for Clergy and Religious, Board for Temporalities, Board for Evangelization and Board for Laity. There are other autonomous ministries such as BCC, Youth Ministry, Media and Fisheries.

## Conclusion

The present survey is the first of its kind in terms of the preparations undertaken for execution, wide coverage of all Parishes and Foranes of the Archdiocese, inclusion of major socio-economic and pastoral subjects, the systematic conduct and team work and involvement of professional experts in various stages. The task and the results of this program are considered as one of the milestones in the annals of the archdiocese of Trivandrum. If this survey and its finding could be instrumental for various ministries to bring out certain remarkable changes in the growth of the People of God in our local church, that will certainly open up for a new horizon in the path of development and building up of the Kingdom of God.

## A HISTORICAL OVERVIEW OF THOOTHOOR REGION

Thoothoor region, comprising of eight parishes/villages, namely, Erayumanthurai, Poothurai, Thoothoor, Chinnathurai, Eraviputhenthurai, Vallavilai, Marthandamthurai and Neerodi, is in the Vilavancode Taluk of Kanyakumari District in Tamil Nadu. It falls under two village Panchayats, namely, Thoothoor and Kollemcode. Formerly part of the princely state of Travancore, it was all along with Kerala ecclesiastical jurisdiction. Since 1955 it is with the Latin Archdiocese of Trivandrum as one of its eight foranes, presently having a special status of an Episcopal vicariate due to its language and civil allegiance.

Thoothoor forane is a unique stretch of land sandwiched by the Arabian Sea on the west, AVM Canal on the east, Neyyar River reaching the sea on the north and Thamiraparani River on the south at the south. The present stretch is almost half of its width after it has been eaten up by the recurring sea erosion which is still unabated in spite of the unscientific retaining walls. It is inhabited by some half a lakh people of whom a very thin minority practices Hinduism or Islam as its religion.

## Unique she is...

Christianity here could trace its roots ahead of the traditional belief in the claim of St. Thomas' arrival through the Jewish merchant relation. ${ }^{1}$ There was Christian presence in Travancore in the $14^{\text {th }}$ century as was evident from the records of the Bishop of Quilon who seem to have sent his missionaries here. ${ }^{2}$ Even before the Portuguese reached Malabar, the country chieftains/kings granted tax exemptions. The king also seemed to have provided a lamp for burning at the Muttam Church as is clear from stone edicts of 1495 and $1525 .{ }^{3}$
There seems to be some kind of primitive religion being practiced among the fisher people here. Other than fishing, related works like vending, coir and net making, raft and boat making and so on are also means of livelihood. The fisher people easily accommodate the Christian faith for safety reasons than anything else stood this far mostly ritualistically.
Though not literate, they seemingly spoke a dialect of Tamil with heavy Malayalam influence with tonal variation from village to village due to its proximity with the villages of Kerala. Each village was rather insulated by a no-man's land and such villages were mostly of one or two clans, so to say, though that space is shrinking to nil almost now.

Continuous recorded history of Christianity begins with the arrival of Francis Xavier, the companion of Ignatius Loyola, to the west cost of India under the Portuguese Padroado dispensation to preach Christianity. Being harassed by the Muslim merchants and others the fisher people of this stretch needed a big brother to protect. This came in the person of Francis, a Portuguese missionary who too was looking for such an opening.

By the time the Portuguese landed in Malabar, this area was definitely under the princely state of Travancore. It was the king of Travancore who granted permission to preach in the coast for some favor seemingly received by him, rather his state.

[^0]Though they were citizens of this state, they were subjects of the Padroado with its headquarters in Goa and later in Cochin. After independence, especially after India opted to be a republic, the Indian states were reorganized on language basis and Kanyakumari District which was part of the erstwhile Travancore state merged into Tamil Nadu. In the early 1950s this area was annexed to the Diocese of Trivandrum from the Diocese of Cochin. Ever since it experienced the two jurisdiction fate with Tamil Nadu dealing with its civil and all other matters and Trivandrum diocese, with its religious and related needs! This has taken great tolls as they for all practical purposes were led by the priests and their systems, leaving to manage their temporal matters by themselves.

## The Baptism

St. Francis Xavier was accompanied by two Indians Chrisovas Fernandez and Malabar Antonio Fernandez. These two Indian companions who were familiar with the language, land and the people of the area, especially with the Mukkuvars. He narrates his joy of baptising the Mukkuvar people to his companions.
When I arrived at a pagan village where they had invited me to come in order that they may become Christians, I would have all the men and boys of the village come together in one place. Then beginning with the profession of the Father and of the Son and of the Holy Spirit, I would have then make the Sign of the Cross three times and invoke the three Persons by confessing one sole God. After this I would recite the Confiteor, and then the Creed, Commandments, Our Father, Hail Mary, and the Salve Regina...As I pronounced them, all, both young and old, would repeat them after me. After I had finished the prayers I would give them an explanation of the articles of the faith and of the commandments of the Law in their own language. After this I would have all of them ask God our Lord for pardon in public for their past life, ... After preaching to them, I ask all, both large and small, if they truly believe in each article of the faith; they all answer that they do. I then recite each article in a loud voice and at each one of these I ask them if they belief and they, fold their arms over their breast in the form of a cross, answer that they do. Then I baptize them, giving to each one his name in writing. The men then return to their homes and send their wives and families, whom I then baptize in the same way as I had baptized the men. When I have finished baptizing the people, I order them to destroy the huts in which they keep their idols; and I have them break the statues of their idols into tiny pieces since they are now Christians...In each of the villages I leave the prayers written in their own language and orders on how they are to be taught each day, once in the morning and again at the hour of Vespers. After I have done this in one village, I go to another; and I thus go from village to village making Christians. ${ }^{4}$
Francis Xavier commenced the work of mass conversion of the Mukkuvars in the western coast in the middle of November 1544 beginning from Poovar. After baptism in a village, he directs the young and children to destroy their old places of worship by demolishing all possible remains of their religion. Instead, he erected a cross and a booth made of branches and palm leaves as place of prayer, worship and gatherings for instructions in the new faith. Thus he had built 45 such 'chapels' in the Travancore coast. ${ }^{5}$ He stayed in a village to instruct them in the new faith for two or three days. Having made such necessary arrangements, he moved to the nearby village. Thus he converted about 10000 in 13 Mukkuvar villages in the span of a month. He left the rest to be baptized by Fr. Mansilhas who came from Punnakayal to continue the mission in Manakudy village. ${ }^{6}$

## A Forane is born...

Thoothoor as Farone at first might have been designed in 1896 when this Portuguese Mission was given to Cochin Diocese. The language-based state reorganization came into force in 1957 only, but Kottar diocese, erected way back in 1930 remained with the Kerala hierarchy till 1962. Even after the reorganization two villages of Kerala, namely South Kollemcode and Paruthiyoor were with Thoothoor forane till 1997 when the Thoothoor Vicariate was confined to Tamil region alone.

Of the eight parishes, Chinnathurai is the youngest to be bifurcated from Thoothoor as late as 1979. Augur, in his 'History of Travankur Christians' testifies that in 1616 there was a church in Thoothoor. None could testify that the present church at Thoothoor was the one referred. The former church at Eraviputhenthurai was antique enough. The church at Thoothoor was seemingly constructed in 1935. Eraviputhenthurai was raised as parish bifurcating

4 Francis Xavier, "To His Companions living in Rome (Cochin, Jan, 27, 1545)" The Letters and Instructions of Francis Xavier, M Joseph Costelloe, ed.,( Gujarat, Gujarat Sahitya Prakash, 1993), 117-8.
5 Cf. Nagam Aiya, II, 297.
6 Cf. Schurhammer, II, 471.

Thoothoor in 1962. Marthandenthurai seems to have been erected in 1956. Erayumanthurai, Neerodi, St Antony Athichanthurai which was seemingly destroyed in plague and flood in 1840, had come into excitantence as parishes or sub parishes in the running of time. Thoothoorthurai, Poothurai, and Vallavilai were considered to be parishes or sub parishes from the time of St Francis Xavier, or mission centres from their time of Baptism in December, 1544. He spent two or three days in a village to baptize all people there. He used to erect a cross at the place of family temple after demolishing it. "When I have finished baptizing the people, I order them to destroy the huts in which they keep their idols; and I have them break the statues of their idols into tiny pieces, since they are now Christians" Later these Crosses thus erected turned out to be shrines. Remnants of such shrines could be seen in almost all villages.

1. This region remained with the Padroado till 1952 when it was terminated. Under many hardship and tribulations it survived the civil authority of Travancore till when it got into the Indian Union.
2. Their Christian formation was entrusted to Jesuit Missionaries until 1762 when it was suppressed. Again when the Society was revived the formation continued up to 1967 Vatican II council's reformation in Kerala Church.
3. In the 1740s, Provincial House of Malabar Jesuit Province was seemingly functioning at Poothurai in this region. From this center, missionaries were sent to Nemam Mission.
4. This Jesuit (Padroado) and Carmelite (Propaganda Fidei) rivalry/conflict did not have much consequences in the region.

## Educational initiatives...

Fr. Cyril D' Costa began the movement to revive the education system with Government aid in the 1940s. The confraternity in the Thoothoor Parish extended its full support to this great attempt. There were two substations with Thoothoor: Eraviputhenthurai and Chinnathurai, both were elevated as parish in 1962 and 1979 respectively. A teacher was paid Rs 30/- per month from the Government Scheme of Adult Education. Religious as well as secular education was imparted from the same set up. The major beneficiaries were young men of confraternity of Our Lady of Mount Carmel. A small house was built by their donation. It was called madam meaning religious /spiritual centre. Tamil and Malayalam were taught to children in the morning. Young men came together in the evening for prayers and other spiritual exercises. Every evening children and young men gathered here and prayed together, discussed religious topics from a book or from the class given. It was a centre of perpetual adoration. They used the books written by the Portuguese missionaries. These were availed from monks at Vadakenkulam. Those who received formation were known as madathukaran. Holy mass young men who underwent training here were regular in prayers, Holy Mass and abstained from vices otherwise common among youngster of the time like alcohol consumption, tobacco products for chewing and smoking and gambling. They wore only white dress as a sign of simplicity and exemplary life. It was like a nursery for Brotherhood in the Rosarian Order since they lacked formal education. The first teacher was removed from the madam for he refused to give the allowance from the Government to the president of confraternity for three years. They appointed new teacher but the Government supported the old one. Thus government aid was stopped after 5 years. The members supported the payment of the teacher and other activities. Their kind of fishing helped them to be regular for the evening classes as they went for small scale fishing using hook and line or nets in the raft. When modernization and migration in the fishing sector gradually crept into, regular attendance became a problem and was affected. ${ }^{8}$ Some of its students became torch bearers of development experimenting mechanization of crafts and modernization of gear and dared deep sea fishing and also contributed to spread the of formal education. A glowing example is the worthwhile effort on the up gradation of Pius XI Primary School into Middle and High School and later Higher Secondary School. All these good trends culminated into the acquisition of an abandoned Sreedhar Hindu College and turning that into the prestigious St. Jude's College which changed the destiny of this area and its youths to take them to the so far untrodden territories and achieve big for themselves, their families and villages.

[^1]Having only $7 \%$ of diocesan territory, Thoothoor forane contributes $18 \%$ of the diocese' faithful, $45 \%$ of priests and some 60 \% of seminarians. The first priest from this region was Rev. Fr. Ladislaus Mendez from Neerody who was ordained for the diocese of Cochin.

## Civil History- Importance of this region

It received Christianity in 1544 from the very Francis Xavier himself. The Mukkuva Prathanikal/chieftains of Thuthur, Chinnthurai, Vallavila and Neerodi received /bought women and children of Pillais. In 1741 the people of this region helped strategically Marthandavarman to win the Colechal War and the unidentified Christian fighters were given Christian burial at Marthandamthurai, a village named after the triumph of king Marthanda Varma, the Great Founder of Travancore state.

All relatively new villages in this region bear the names of kings of Travancore, Eravi, Chinna, Eraimen, Marthandan, Adhichan, etc. In 1803 and 1810, the people from this region gave support to put down Nair uprising against the King and British residence.

The creation of Ananda- Victoria - Marthandan Canal separated this region from main land for centuries since the canal had twenty feet depth and 10 meters width. It was created in the year of 1727 . The canal had tax collection center at Athichanthurai, later shifted to Poothurai.

Kollemcode, Vallavila and Poothurai were centers of coir making. Kollencode had market of kattamarams/country raft in Travancore, Athichanthurai had a big market for 'copra', salt, coir and fish.

## List of Charts in the <br> Chat Forane Level Report of Thoothoor

1 Ownership of houses
2 Type or quality of houses

## CHAPTER 1

## INTRODUCTION

## Context

The Latin Catholic Archdiocese of Trivandrum was established in 1937. Half a century has elapsed under four Prelates. The Golden Jubilee Celebrations offered a good opportunity for reflection on the current status as well as future possibilities of the Diocese. Naturally the importance of developing socio-economic as well as pastoral profiles of the population, parishes, Foranes and the Archdiocese as a whole was keenly felt. After weighing the pros and cons as well as considering the modalities to be adopted, it was decided to do a comprehensive and integrated census survey, covering the entire families and individuals of the Archdiocese.

## Goal/Overall Objective of the Survey

The ultimate goal of the Census survey was to ensure that Archdiocesan, Forane and parish level socio-economic and pastoral planning processes are made more specific, measurable, achievable, realistic and time bound (SMART) and based on empirical data.

## Specific Objectives

- To collect/generate comprehensive and reliable data bearing on all aspects in the socio-economic and pastoral life of the families and individuals in the Archdiocese
- To prepare and bring out separate reports for each forane and a consolidated report of the entire Archdiocese, containing the findings of the survey.

## Data Base

All Latin Catholic families who were members of the Parishes belonging to the Latin Archdiocese of Trivandrum (hereinafter called Archdiocese) consisted of the data base for the survey

## Source of data

The source of data used for this report was the census survey conducted by Trivandrum Social Service Society (TSSS) during the 2011-2012 period.

## Geographical Coverage

The survey tried to cover all the Latin Catholic families who were members of 115 Parishes in 8 Foranes in the Archdiocese. The names of Foranes and corresponding number of parishes covered in the survey are given in the table below:

## Foranes and number of parishes covered in the survey

| SI. No | Foranes | No of Parishes including <br> sub-stations |
| :--- | :--- | :--- |
| 1 | Thoothoor | 8 |
| 2 | Pulluvila | 15 |
| 3 | Kovalam | 14 |
| 4 | Valiyathura | 10 |
| 5 | Pettah | 19 |
| 6 | Palayam | 19 |
| 7 | Puthukurichy | 19 |
| 8 | Anchuthengu | 10 |
|  | Total | 114 |

## Demographical Coverage

The Survey covered 58501 families and 217821 individuals with 112287 males ( $51.55 \%$ ) 105534 females (48.45\%) in 8 foranes.

## Sectoral Coverage

The survey covered several important and relevant sectors and subjects and collected data on families and their members. The following table shows the family-based and individual-based data collected on various areas and subjects.

Areas and subjects covered by the Survey

| Sectors | Subjects |
| :--- | :--- |
| A. Family-based data |  |
|  | Ownership of House |
|  | Type or Quality of House |
|  | Number of rooms in the house |
| Land | Number of families living in the house |
|  | Number of members living in the house |
|  | Ownership/possession/ occupation of land |
|  | Area of own land |
|  | Gender distribution of land ownership |

| Energy consumption |  |

| Health | Diseases |
|  | Bad habits |
|  | Disabilities |
| Involvement in Church/ Civil society organizations |  |
| Faith life | Participation in Holy Mass |
|  | Catechism |
|  | Sacrament of Reconciliation |

## Data collection process

Having decided on the geographical, demographical, sectoral and subject-wise coverage, a specific interview schedule corresponding to the areas and subjects was framed by the Archdiocesan team as the main tool for collection of data. Keys and supporting notes were made and sufficient copies were printed. Simultaneously, investigators for data collection were identified by the Parishes at the BCC level under the guidance of the Archdiocesan survey team. Subsequently, trainings were conducted to impart necessary knowledge and skills to the enumerators identified for data collection. Under the direct monitoring of the Parish Priests, the enumerators collected data from the families at the BCC unit level in the parishes.

Data collection involved 2050 persons and took 6 months to cover the entire area. During the process, frequent visits and interactions were made by the survey team.

## Data processing

The data thus collected in printed schedules were sorted out and minor errors were rectified. The entire data were then entered into a tailor-made SOFT WARE so that the outcome of the survey could be directly accessed by the parish priests to understand the profile and situation of each and every family in the Parish. Subsequently, it was decided to prepare a consolidated survey report which could be of immense support for multi-level planning processes in the Archdiocese for a reasonable period of time.
Accordingly, data entry was completed with the support of a team of technical personnel and a directory of families was released based on it. Finally, the work of tabulation and analysis of data together with the task of report formulation at the Forane and diocesan levels was entrusted with a State level specialized agency, ADHWANA. After tabulation of the entire data at the Forane and diocesan levels, interpretation and analysis of the data were completed. Forane-wise reports were separately prepared for 8 Foranes and an Archdiocesan report was prepared at the end. During this process, series of discussions took place with the Survey Coordination Team.

## The Reports

Each report is organized into three chapters. This first chapter deals with context and methodology of the entire process of the census survey. The second chapter presents the data processed in interpretative narration with charts or tables, hinting on the findings and implications of the information. Where ever relevant, sex-wise and age-wise analysis was attempted. In the third chapter, a summary of findings, related conclusions and some recommendations are given. The recommendations are meant to provide a space for more thinking to address the problems reflected in the survey findings. However, it is for the concerned communities to collectively plan appropriate programs to address their issues in a meaningful manner.

In all cases, original tables are given in the Annexure, while charts and summary of some tables are included within the report at appropriate place.

## Limitations of the Survey

- Though it was planned to cover the entire families and all the parishes in 8 Foranes in the Archdiocese, the coverage is subject to further verification with other sources of information such as Parish records.
- The usual data collection errors crept into the data to a small extent. The enumerators were mostly raw persons without prior experience in the job.
- Data requirement on a large number of subjects was not fully responded in several sectors and no data was available on those subjects.
- It was also found that some of the data available were not tallying with other related data, may be, due to differences in understanding the questions from the part of the interviewers and respondents.
- Since there were no earlier reliable reports or statistics corresponding to the regions and subjects covered by this survey, the analysis could not be carried out by comparing or contrasting with the past situation.

## Scope of the Survey

- In spite of the above limitations, which one has to expect in any such large process, the present survey has brought forth a very high level of qualified and quantified information useful for planning in sectors and localities covered in the survey.
- It brought forth conclusions and recommendations which could be followed up by the Archdiocese in the near future through its various Ministries and Commissions.
- It provides reasonable insights for other dioceses to take up similar processes for planning
- The tables annexed to this report at the end will help individual parishes to find their situation and plan their programs accordingly.

## Thoothoor Forane

This volume is the Forane level Report of the Thoothoor Forane. Thoothoor Forane consisted of 8 Parishes located along the coastal belt of Vilavankode Taluk in Kanyakumary District in Tamil Nadu. The languages spoken in the region included Tamil and Malayalam. All the sectors and subjects mentioned above were covered in the survey. In the next chapter, the data on Thoothoor Forane is presented with graphics and charts at appropriate places.

## CHAPTER 2

## PRESENTATION OF DATA

In this chapter, the tabulated and processed data on Thoothoor Forane are presented under various sectors and subjects. First section deals with family-based information, while section two presents the situations regarding individual members in the respondent families.

## SECTION ONE: Families

According to the survey, there were 10004 respondent families from Thoothoor Foronate covering 8 parishes. The largest number of families (1677) lives in Vallavila Parish (16.76\%), while the next largest number (1610) is found in Thoothoor Parish (16.09\%). Erayumenthurai Parish has the smallest number of families (620) in the Foronate (6.20\%).

Family-wise distribution of parishes in Thoothoor Foranate

| SI No | Name of the Parish | Frequency | $\%$ |
| :--- | :--- | :--- | :--- |
| 1 | Vallavilai | 1677 | 16.76 |
| 2 | Thoothoor | 1610 | 16.09 |
| 3 | Neerodi | 1491 | 14.90 |
| 4 | Chinnathurai | 1440 | 14.39 |
| 5 | Poothurai | 1091 | 10.91 |
| 6 | Marthandamthurai | 1057 | 10.57 |
| 7 | Eraviputhenthurai | 1018 | 10.18 |
| 8 | Erayumenthurai | 620 | 06.20 |
|  | Total | 10004 | 100 |

Family-wise distribution of parishes in Thoothoor Foranate

## HOUSING

## Ownership of houses

Ownership of a house by a family is considered as the most basic asset for progress and so the most important indicator for sustainable development, socio-economic status, rootedness, identity and long standing relationships. The subjects covered in housing sector were ownership of houses, type or quality of houses, number of rooms in the house and number of families living in a house. 'The homeless' was defined as those who have no house and so live with their parents, siblings or children.
Table No 1 deals with ownership of houses. The concept of ownership in this survey included real ownership, possession and occupation of a house. In Thoothoor Forane, though a good majority of families ( $70 \%$ ) owned their houses, $25 \%$ (2456) of families were found to be homeless at the Forane level. $4 \%$ of families lived in rented houses in the Foronate. Chart No. 1 The same order of distribution was found in all the Parishes in the Foranate. (Chart No. 1)

Chart No. 1: Ownership of houses

Among the homeless at the Parish level, Neerodi Parish topped the rank with regard to the percentage of homeless families with $28.97 \%$ (432) of total families in the Parish (1491). Vallavila has the next largest percentage of homeless families ( $26.24 \%-440$ ) in the Foronate. Marthandanthurai had the largest percentage of families having own houses ( $73.23 \%$ ).

## Type or quality of houses

Table No. $\mathbf{2}$ presents the type or quality of houses owned or possessed or occupied by the families who reported that they had their 'own' houses. As per the data available, the largest section of families in the Foranate lived in concrete houses ( $35.52 \%$ ) and a fairly good percentage lived in tiled houses (13.74\%). Though only $3.77 \%$ of families lived in huts or thatched houses, a substantial percentage of families (19.56\%) lived in sheet-roofed houses (1957). (Chart No. 2)

Chart No. 2 : Type or quality of houses

Thus, as many as 2334 families ( $23.33 \%$ ) lived either in huts or in thatched houses or in sheet-roofed houses, which is almost equal to the number of homeless families amounting to the total of $47.88 \%$ of families whose biggest concern remains to be a good livable and durable house for their families.

Neerodi parish was found to be having more percentage of families living in huts, while Chinnathurai had the largest percentage of families living in concrete houses (46.67\%).

## Number of rooms in the houses

An analysis of the number of rooms in the houses surveyed in the Foronate is given in Table No.3. Accordingly, $52.45 \%$ (5247) of families lived in houses having 1-4 rooms and a smaller percentage ( $21.16 \%-2117$ ) of families lived in houses with more than 4 rooms. (Chart No. 3)

Chart No. 3: Number of rooms in the houses

This means that 10004 families lived in 7364 houses, assuming that no family lived on the street. Friends and or relatives accommodated the homeless in their shelters. This increased the vulnerability of the homeless families because at any moment they could be forced to get out of the home they lived.

## Number of families accommodated in a single house

Table No. 4 presents the number of families accommodated in a single house. A slight majority of the families ( $52.68 \%$ ) were accommodated in single houses. It was found that $19.42 \%$ (1943) families were accommodated in half the number of houses with two families in each house. A smaller number of houses (505) accommodated three families (5.05\%). Data was not available in this regard from $21.68 \%$ of families.
The highest instances of one family-one-house pattern were found in Poothurai parish ( $59.95 \%$ ). Minimum number of such families was found in Erayumenthurai parish with 277 families (44.68\%).

Chart No. 4 : Number of Families accommodated in a single house

On the whole, largest sections of families both in the Forane level and in the Parish level were found sharing one family-one-house pattern.

## The accommodation pattern of individual members in houses

The accommodation pattern of individual members of families in the available houses is reflected in Table No.5. The largest section, that is, 3930 families ( $39.28 \%$ ) had only $1-4$ members, while $33.62 \%$ (3363) of families lived with 5-8 members. The data do not make it clear if these members belonged to a single family or more than one family. Here, as many as 2093 (22.58\%) families did not provide information. (Chart No. 5)

Chart No. 5 : The accommodation pattern of individual members in house holds

Neerodi Parish had the highest instances of more than 8 persons living in a single house ( $9.46 \%$ ).
What was revealed in the analysis was that housing was a major issue both in terms of number of homeless families and in terms of quality of houses in the Foronate.

## LAND

This sub-section deals with ownership, possession and occupation of land by the families, area-wise distribution and sex-wise distribution of ownership, possession/occupation in Thoothoor Foranate.

## Ownership/ Possession and Occupation of various nature of Land

According to the data given in Table No.6, of the 10004 families, only 3850 families ( $38.48 \%$ ) had their 'own' land, excluding those families who lived in 'Kudikidappu' land (3.45\%), Puramboke land (1.99\%) and church-owned land $(30.88 \%)$. The Forane has $2270(22.69 \%)$ landless families. (Chart No.6)
Across the parishes Neerodi had proportionately the largest percentage of families having own land in the foronate $(52.58 \%)$ and the largest percentage of landless families ( $26.89 \%$ ). In Poothurai, the largest percentage of families in the Parish lives in church land (51.97\%). A negligent portion of families lived in Kudikidapu or Puramboku.

Chart No. 6 : Ownership/ Possession and Occupation of various nature of Land

## Land Area-wise distribution of families

Table No. 7 reports the distribution of land among families who had some type of land under their ownership/ possession/ occupation. It was found that the majority of families in the Foronate (5629) had 0-5 cents of land $(56.27 \%)$. Only an insignificant percentage of families ( $2.54 \%$ ) had more than 15 cents of land. There was a lack of information regarding $880(8.80 \%)$ families. This pattern is followed in the Parishes also. (Chart No.7)

Chart No. 7 : Area-wise distribution of families

## Sex-wise distribution of land

Table No. 8 speaks about the sex-wise distribution of land ownership/ possession/ occupation. It was found that the terms, 'ownership', 'possession' and 'occupation', were used interchangeably to mean that the land was currently utilized by the respondent families. It can be understood merely as control over the land under their occupation. With regard to $47.97 \%$ (4799) of total families, control over land was vested with male adult members, while only $12.85 \%$ (1286) families reported that their land was with female adult members. $491(4.91 \%)$ said that the land was 'owned' jointly by the male and female adult members, most probably husband and wife.

## Chart No. 8 : Sex-wise distribution of land

As far as the individual parishes in the Foronate were concerned, the same pattern as the Forane was found in all the Parishes except in the case of Eraviputhenthurai where proportion of male control is slightly higher than that in other parishes.

Land, the most basic asset for sustainable development, remained to be a matter of concern in the Foronate. The fact that landlessness was closely related to homelessness was validated by the data available from the survey.
Among those who said that they had some kind of land, the majority ( $56.27 \%$ ) had only the minimum size of land ( $0-5$ cents).

While that there was a clear picture of male domination in the matter of control over land, there was a need for further examination regarding the type of control and legal status of land where they lived.

## ENERGY CONSUMPTION

## Energy consumption for cooking

The survey inquired about the source of energy used for cooking by the families in the Forane and examined the percentage of families using one or more of the sources like smokeless stoves, traditional stoves, LPG, Biogas, Solar energy and electricity. Variations in the use of energy sources were considered in the survey as an indicator of awareness about energy and its sources, impact of use of energy on climate change and sustainable development and impact on family expenditure.
Table No. 9 reveals that majority of the families in the Forane used LPG ( $51.10 \%$ ). It was alarming to note that as high as $34 \%$ (3401) families still used traditional stove using firewood. The data shows that 570 families used more than one source. Smokeless stove was partially depended on by a very small proportion (8.84\%) of families. Still less number of families (624) used biogas ( $6.24 \%$ ). Very insignificant percentage of families used solar sources. A small portion of the families ( $470-4.70 \%$ ) used electricity together with other means for cooking. 1719 ( $17.18 \%$ ) of the surveyed families did not provide any information on this subject. (Chart No.9)

Chart No. 9 : Energy consumption for cooking

In the parish level, Eraviputhenthurai had the highest percentage of families (66.90\%) using LPG, followed by Poothurai ( $62.42 \%$ ) and Marthandamthurai ( $55.91 \%$ ). In the case of traditional stove, it was Neerodi Parish where it was found that highest number of families used it (55.67\%) together with other sources.

Use of non-conventional and renewable energy sources was found very limited among families in Thoothoor Foronate.

The use-pattern of different energy sources showed that the level of awareness about energy and its sources, impact on climate change and sustainable development and impact on family expenditure was very low.

## ECONOMIC CONDITIONS

## Home appliances

Ownership of one or more of the home appliances was related to the economic position of the families. Table No10 deals with the use of home appliances by the families in Thoothoor Foronate. Fan was found as the most popular home appliance used by the majority of families (67.61\%), followed by Grinder (48.56\%), Mixy (41.90\%) and Fridge ( $37.97 \%$ ). It was found that computer was used by more families $(2.94 \%)$ than those who used tape recorders (1.68\%). There were a very small percentage of families using or owning Air Conditioners. It was alarming to note that as high as $24.32 \%$ (2433) families, that is, almost one fourth of the total families, did not own any of the above home appliances.

Neerodi stood higher in this regard with 449 families (30.11\%) out of 1491 families. Parish-wise data also showed the same pattern. (Chart No.10)

Chart No. 10 : Home appliances

Since ownership and use of modern and more home appliances in a house is an indicator of high economic status of the families, the substantial number of families not having even a fan, is a case for concern.

## Ownership of Vehicles

Ownership of vehicles is another important indicator of economic status of the families. In Thoothoor forane, it was found that a vast majority of families ( $79.87 \%$ ) did not own even a bicycle. Among those who owned any of the vehicles, the largest section, that is, $12.24 \%$, owned two wheelers, followed by those who owned bicycle ( $4.90 \%$ ) and those who had four wheelers (1.73\%) (Table No.11) (Chart No 11)

## Chart No 11 : Ownership of Vehicles

The same pattern of distribution was found in the Parish level data. In the Parish level analysis, it was noted that Thoothoor Parish stood higher in the case of two wheelers (17.95\%) and four wheelers (2.30\%). Vallavilai stood higher with $7.87 \%$ (92) of families with bicycles. In Marthandamthurai, the highest percentage of families (82.09\%) did not own any of the above vehicles.

Thoothoor forane was found lagging behind in the case of ownership of vehicles as an indicator of economic strength.

## Media and Publications

The use of and subscription to various visual and print media products is an indication of financial position, involvement in public affairs, level of civic sense and thirst for knowledge. Table No. 12 presents the data regarding the ownership/use of news papers, periodicals, telephone, mobile phone and television. List of items listed for specific enquiry included news papers, Jeevanum Velichavum (the Archdiocesan monthly), Jeevanadam promoted by the Latin Catholic Church in Keraal, other publications, television, land phone, mobile and internet.

It was found that television was the most popular medium used by the largest number of families ( $60.33 \%$ ), followed by mobile phones ( $50.97 \%$ ). Land phone ( $16.88 \%$ ) was the next largest source of information used by the families in the Foranate. A very small percentage of respondent families ( $4.10 \%$ ) subscribed to and read news papers, which was considered as an important indicator of civic sense and general social awareness. Around one fourth of the total surveyed families ( $24.16 \%$ ) did not have any of the above media/publications/source of information, not even a news paper. (Chart No 12)

Chart No 12 : Media and Publications

The low profile of the Forane in the case of media and publications extends beyond mere economic profiles of the families. It follows that a substantial percentage of families stood excluded from the reach of media and publications and means of modern communication. Further enquiries would be needed to probe further the impact of this situation.

## Ownership of Fishing Assets

Ownership of Fishing Assets was an important and direct indicator for the economic base of the families who are predominantly Mukkuvars with fishing as their major source of livelihood. Table No. 13 deals with this subject. A very important observation from the analysis of the available data showed that a good majority of families, that is, $79.98 \%$ (8001) did not own any of the listed fishing equipments in the foranate of Thoothoor. Out of the remaining $20.02 \%$, the largest section ( $6.76 \%$ ) owned trawling boats, followed by the next smaller sections having 'vallam' (small country boats) (5.18\%) and 292 families having kattamaram (2.95\%). (Chart No 13)

Chart No 13 : Ownership of Fishing Assets

The above picture of fishing assets showed that the fishing communities in Thoothoor forane had shockingly low asset base of fishing equipments. Their investment in this regard was negligent. It could be understood that either the number of families depending on fishing and fishing equipments for their livelihood was steeply shrinking or they had been investing in other permanent assets like land. But we had observed that the asset base in land was also very meager.
This observation and comment only means that a vast majority of the fisher families did not own their own fishing assets and so remained as wage labourers of a minority of families that owned these assets. The total available fishing assets may be sufficient or more than sufficient in comparison with the yield from the fishing activities in a particular area. More than sufficient assets become financial liabilities.

## Other Equipments

Regarding the ownership of other equipments as assets for livelihood, besides fishing equipments, a number of items were considered by the survey as given in Table No.14. A vast majority of the families in the foronate did not own any of the items listed in the said table ( $89.68 \%$ ). Of the remaining, $10.32 \%$ which included families who did not give any information (35), $8.27 \%$ (827) families possessed sewing machine and only a very insignificant numbers of families had one or the other equipments listed in the survey.

Chart No. 14 : Possession of Other Equipments

While the ownership of other equipments as assets were also considered as indicators of economic strength, the families in the foronate were found to be having a very low share pointing to their vulnerable financial base for progress. All these 'other equipments' were included in the study as means of livelihood or business.

## Trade and Commerce

Table No. 15 presents data on proprietorship or ownership of firms, businesses or self-employment units in Thoothoor foronate. The data shockingly revealed that the families were very poor in trade and commerce. A vast majority of the families, that is, $93.61 \%$ (9365) did not have any one of the firms or shops or industry or selfemployment units. Among others, only $2.43 \%$ (243) had some kind of self-employment units. This also revealed another fact that majority of the people who owned sewing machines were not making use of it for income generation for livelihood. Very small number of families had tiny shops (1.42\%). (Chart No 15)

Chart No. 15 : Trade and Commerce

One after the other the indicators for economic status of the families in the Foronate showed that the situation was very bleak.

## Agriculture

Agriculture as reported here excluded fishing and included popular crops found in Kanyakumari District and southern Kerala. Table No. 16 provided the details regarding the distribution of families having various crops. As one may expect from any fishing community in the region, $96.08 \%$ ( 9612 ) did not have any of the crops cultivated in their land. Even the most popular crop of coconut trees were planted by a small percentage of families (2.28\%).

Chart No 16 : Agriculture

Lack of land, lack of an agricultural tradition other than fishing, lack of interest in and knowledge of agriculture and lack of exposure to farming communities may be behind this low participation of fishing communities in agriculture in the area under observation. Participation in agriculture was also considered as an indicator of the communities' awareness of the need for alternative employment options in view of depleting fishery related sources of livelihood. Lack of land also indicated that the family did not enjoy much social status.

## Spending Pattern (Monthly Expenses for food)

A family's monthly expenses for food, education and health care were considered pointers to the financial position of the family and priorities in spending by the family. These are basic needs and one can not escape from such expenses in the modern world. Table No.17a contained details of the expenses for food. Three categories were made for the sake of analysis: families who spent less than Rs.2000/- and families who spent between Rs. 2000/and Rs.3000/- per month and families who spent more than Rs.3000/- for food alone. In Thoothoor forane, a vast majority of families spent ( $83 \%$ ) spent more than Rs.2000/- per month for food $40.74 \%$ of the families spent more than Rs.3000/- per month. (Chart No 17a)

Chart No 17a : Spending Pattern (Monthly Expenses for food)

There are a good number of families (12\%-1246) lived on meager level of food input impacting on their health and pointing to their weaker financial status. The Rs. 2000/- mark was given to distinguish the BPL categories from APL families in terms of food consumption.

## Monthly Expenses for Education

This sub-section speaks about how families in Thoothoor foronate spent for education of their children. Three categories were made with families who spent less than Rs.2000/- per month and families who spent between Rs. 2000/- and Rs.3000/- per month and families who spent more than Rs.3000/- for education. The Rs.2000/- mark was considered as a reasonable amount per month for all expenses for good education to the children, including English medium in good schools and educational institutions.

Barring the families who did not spent anything for education, may be because they did not have children studying, the largest section (24\%) of families spent less than Rs.2000/- per month for education of their children, while $16.65 \%$ spent between Rs.2000/- and Rs.3000/- per month. A good percentage of families (14.81\%) spent more than Rs.3000/- per month for education of their children. (Table No.17b) (Chart No 17b)

Chart No 17b: Monthly Expenses for Education

## Monthly Expenses for medical care and treatment

Health was another important area where families made spending regularly. Three categories were made with families who spent less than Rs.2000/- per month and families who spent between Rs. 2000/- and Rs.3000/per month and families who spent more than Rs.3000/- for medical expenses. According to Table No. 17c, a substantial percentage of families ( $43 \%$ ) spent less than Rs.2000/- per month, while $28 \%$ of families spent between Rs.2000/- and Rs.3000/- and only 19\% spent more than Rs.3000/- per month for medical treatment. (Chart No 17c)

Figure 17c : Monthly Expenses for medical care

It could be noted that more families in Thoothoor foronate spent more for food and health care and less for education.

## Monthly expenses for other expenses

Other expenses included all other expenses than those for food, education and medical care. The data showed that families did not keep an account of things they spent on many of the other regular items. No data was available from a vast majority of families in the foronate ( $90.15 \%$ ). Of the remaining, $5.44 \%$ of families spent less than Rs.2000/per month, while $4.41 \%$ spent more than Rs.2000/- per month for other expenses. See Table No. 17d.

## Chart No.17d : Monthly expenses for other expenses

Families in the Foronate spent less than moderately for food, medical care and for education. The shape of data points to a lack of budgeting habit according to pre-designed plan and set values and priorities among the people. Many families could not provide accurate information regarding how they spent and for what they spent. Spending patterns and prioritization were also related to the financial status of the families. The fact that largest section of people spent less than moderately for necessary items and a vast majority did not provide information on other expenses gives a hint that they spent their money on items which they did not want to let others know.

## Debt

Debt was another important indicator of economic status of families. Table Nos. 18 and No. 19 dealt with debts incurred by the families. $70.92 \%$ (7095) of the families were indebted to one or the other way, while 29.08\% (2909) reported that they did not have any debt. The largest section of families (22.69\%) had a debt of Rs.1-3 lakhs, followed by those having Rs. 50000 - 1 lakh ( $13.50 \%$ ) and those having a debt of 3-6 lakhs of rupees ( $11.45 \%$ ). 491 $(4.91 \%)$ families reported that they had a debt of more than Rs. 10 lakhs. (Chart No 18)

## Chart No 18 : Debts

In the case of individual parishes in the Foronate, Eraviputhenthurai had the highest percentage of families having debt (76.13\%).

Chart No. 19 : Details of Debts

## Ration Cards

Table No. 20 presents the status of ration card holding by the families. Ration card is a one of the basic entitlements of a citizen and family of citizens. As per the data available, in Thoothoor forane a good majority of families (8082) did possess ration cards (80.79\%). But, those who did not have a ration card amounted to 1922 families (19.21\%). (Chart No. 20)

Chart No. 20 : Ration Cards

## APL and BPL Families

Though this APL-BPL categorization for understanding economic status was included in the survey, the data collected from Thoothoor Forane presented un-matching figures. This may have happened due to the negligence of the respondent families to refer to their ration cards or the investigators made some mistakes in collecting correct data. (Table No.21)

Table No. 21 : APL and BPL Families

| 30. APL / BPL |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| SI. <br> No. | Name of Parish | APL / BPL |  |  |  |  |  | Total |
|  |  | APL | \% | BPL | \% | N/A | \% |  |
| 1 | Neerodi | 1168 | 78.34\% | 17 | 1.14\% | 306 | 20.52\% | 1491 |
| 2 | Marthandamthurai | 16 | 1.51\% | 32 | 3.03\% | 1009 | 95.46\% | 1057 |
| 3 | Vallavilai | 117 | 6.98\% | 1042 | 62.13\% | 518 | 30.89\% | 1677 |
| 4 | Eraviputhenthurai | 4 | 0.39\% | 11 | 1.08\% | 1003 | 98.53\% | 1018 |
| 5 | Chinnathurai | 940 | 65.28\% | 148 | 10.28\% | 352 | 24.44\% | 1440 |
| 6 | Thoothoor | 22 | 1.37\% | 129 | 8.01\% | 1459 | 90.62\% | 1610 |
| 7 | Poothurai | 45 | 4.12\% | 112 | 10.27\% | 934 | 85.61\% | 1091 |
| 8 | Erayumenthurai | 48 | 7.74\% | 75 | 12.10\% | 497 | 80.16\% | 620 |
|  | Total | 2360 | 23.59\% | 1566 | 15.65\% | 6078 | 60.76\% | 10004 |

## Medical Insurance

Medical insurance is a social security measure intended to support the families financially in times of health needs and health crisis and is an important criteria for economic wellbeing. However, Table No. 22 reported that a vast majority of families $(85.03 \%)$ did not have a health insurance policy at the time of data collection. Only a small percentage of families (14.97\%) had medical insurance. (Chart No 22)

Chart No. 22 : Medical Insurance

## Toilets

Toilets used for sanitation was considered as an indicator of basic needs, health status, personal and family privacy and civic sense. Table No. 23 dealt with this aspect. In Thoothoor forane, the data showed that 7555 families $(75.52 \%)$ had toilets inside their homes and $8.68 \%$ of families (868) used public toilets. It was disturbing to note that $10.21 \%$ of families (1021) used open space for defecation. $5.60 \%$ did not provide any information regarding this (Chart No 23).

Chart No. 23 : Toilets

## Source of Water

Source of water for domestic purposes including drinking was included in the survey as an important indicator for wellbeing and healthy life. According to Table No.24, the largest section of families, that is, $59.02 \%$ (5904) in Thoothoor forane had public piped water provided by the Panchayat, while $22.75 \%$ (2276) depended on bore
well together with other sources. 1066 families ( $10.66 \%$ ) got water from their own well, while a small percentage of families fetched water from the public well. It was noted that 247 families ( $2.47 \%$ ) spread in all the 8 parishes purchased water from external sources. As many as 711 families ( $7.11 \%$ ) received water from other houses. The above sources of water were considered as sources of different quality levels and as such had their impact on the health and wellbeing of the users. (Chart No 24)

## Chart No 24 : Source of Water

The parishes which topped in the use of various sources of water were Marthandanthurai for own well (21.48\%), Neerodi for public well (14.69\%), Eraiyumen thurai for own pipe (24.03\%), EP thurai for public pipe (73.28\%), and Chinnathurai for borewell $(44.24 \%)$, water, Neerodi for rain water ( $1.61 \%$ ) and Poothurai for other sources than those mentioned in this survey ( $11.55 \%$ ).

Further enquiries are required to ascertain if one is the better source than the other. Since majority of the families used public pipe and bore well as one of their sources of water for domestic purposes, there is a need to examine the quality of the water.

## Drainage

Survey looked into the manner in which the families managed their waste water or used water and liquid matter. This aspect had an influence on the health and hygiene of the families and their neighborhoods. Table No. 25 described the distribution of drainage types. Majority of the families ( $56.39 \%$ ) used arranged pits to drain waste and used water, while $5.18 \%$ (518) had some kind of proper drainage system. However, a substantial percentage of families (37.84\%) did not use any of the above types. (Chart No 25)

## Chart No 25 : Drainage

Further enquires are required to know what $37.84 \%$ of families have been doing with their waste and used liquid substances.

## Solid waste disposal

The manner in which families disposed their solid waste was examined by the survey because this was an important indicator of health and hygiene and civic sense. Table No. 26 revealed that the majority of the families (57.28\%) threw their solid waste into the sea or lake. A smaller percentage of families (17.01\%) disposed it in their own land or premises. It was noted that $10.70 \%$ (1070) used public waste box for waste disposal. (Chart No 26)

Chart No 26 : Solid waste disposal

The data clearly revealed that there was a lack of proper awareness among the families about the need and importance of proper disposal of waste.

## EDUCATION

## Education support given to children

Education was a major area of focus in the survey. Various aspects dealing with education of the children were examined such as study facilities at home, parents' monitoring and community support to students. Tables No.27, No. 28 and No. 29 dealt with these aspects respectively.

The survey enquired if the students had tables and chairs, proper study time at home and text books. Barring 3809 ( $38.7 \%$ ) families where there was no one studying, $31.24 \%$ (3125) of families provided tables and chairs to their children for study. But, only $16.25 \%$ (1626) of the families reported that there was a proper time for study at home. The data shows that only $7.15 \%$ had text books made available to them from the beginning of the courses. 21.31\% (2132) of the families did not have any of the above facilities. (Chart No 27)

Chart No 27 : Study facilities at home

## Frequency of time spent by the parents for monitoring their children's study

Table No. 28 measured the duration of time spent by the parents for monitoring their children's study. Barring 3504 families where there were no children studying, the largest section ( $46.27 \%$ ) of families reported that they always cared for their children's study. 871 families ( $8.71 \%$ ) said that they occasionally monitored their children's study (Chart No 28).

Chart No 28 : Frequency of time spent by the parents for monitoring their children's study

## Types of Community support

Table No. 29 dealt with the types of community support made available to children for their study. The possibilities of financial assistance, provision of study facilities, supervisory attention, free tuition and guidance were examined as supports from the community including parishes. The largest section (21.69\%) said that they did not receive any of the above mentioned supports from the community. Free tuition was mentioned as one of the supports received by $8.88 \%$ ( 888 ) of the families. A few families received monitory support ( $5.02 \%$ ), study facilities ( $5.17 \%$ ), supervision (2.84\%) and guidance (5.95\%). (Chart No 29)

Chart No 29 : Types of community support

The picture drawn from the data available was not at all encouraging. Family support and community support were not enough to help the children for their studies. While education was the most important base for the sustainable progress of any family or community, the facilities and support envisaged or provided were the minimum, according to the data presented above.

## FAITH LIFE

The next three tables dealt with various aspects of faith life of the families in Thoothoor foronate.

## Families possessing P O C Bible

Table No. 30 reported that a vast majority of the families ( $91.98 \%$ ) had P OC Bible in their homes.
(Chart No 30)

Chart No 30 : Families possessing P O C Bible

## Participation in Family Prayer

According to Table No.31, $74.25 \%$ (7428) of the families always had family prayer, while $17.88 \%$ (1789) prayed together with the families occasionally. It was found, however, that $7.05 \%$ (705) families never had family prayer. Chart No 31

## Chart No 31 : Participation in Family Prayer

## Participation in B C C Meetings

Table No. 32 provides the information that a good majority of families ( $79.66 \%$ ) always participated in BCC meetings. But, $16.07 \%$ (1608) of the families never went for B C C Meetings. Chart No 32

Chart No 32 : Participation in B C C Meetings

On the whole, the data provided on faith life of the families in Thoothoor foronate showed that majority of the families were faithful to their prayer life, possession of Bible and duty to participate in the meetings of Basic Christian Communities.
Periodical updating of the present data alone will help one to measure if the trend persisted or declined or increased.

## Death within three years

Mortality rate of the people in a particular country or region is of great relevance in calculating the longevity or health of its people. According to Table No.33, no one died during the three years prior to the survey in $88.68 \%$ of the families (8872) in Thoothoor foronate. Death did occur in a few families due to reasons such as diseases (4.56\%)
old age ( $3.33 \%$ ), accidents ( $0.90 \%$ ), suicides ( $0.25 \%$ ), murders ( $0.03 \%$ ) and other natural reasons ( $1.35 \%$ ). Infant deaths were also reported during the specified period ( $0.75 \%$ ). Unnatural deaths were limited. (Chart No 33)

Chart No. 33 : Death within three years

## SECTION TWO

## Individual members of the families surveyed

The second section of this chapter is devoted to report the information regarding the individual members of the families. There were 38787 persons covered in the survey from the 8 Parishes. Its is $17.81 \%$ of the Archdiocesan population. Sector-wise and subject-wise collection of data was carried out with regard to the members.

## Member-wise distribution of parishes

In terms of individual members in the parishes in Thoothoor forane, Vallavila parish stood first with 6658 persos, i.e., $17.17 \%$ of the total population of the Forane, followed by Neerodi ( $6281-16.19 \%$ ). The smallest parish in terms of population is Eraviputhenthurai with 2157 persons (5.56\%).

Member-wise distribution of parishes

| SI No | Name of the Parish | Frequency of Individuals | $\%$ |
| :--- | :--- | :---: | :---: |
| 1 | Vallavilai | 6658 | 17.17 |
| 2 | Neerodi | 6280 | 16.19 |
| 3 | Thoothoor | 5932 | 15.29 |
| 4 | Chinnathurai | 5555 | 14.32 |
| 5 | Marthandamthurai | 4199 | 10.83 |
| 6 | Poothurai | 4164 | 10.74 |
| 7 | Erayumenthurai | 3842 | 9.91 |
| 8 | Eraviputhenthurai | 2157 | 5.56 |
|  | Total | 38787 | 100 |

## Member-wise distribution of parishes

## Sex-wise distribution of population

According to Table No.34, Thoothoor Forane covering 8 parishes had a total of 38787 persons with 20222 males ( $52.14 \%$ ) and $18565(47.86 \%)$ females in 10004 families. This means that the family size was 3.87 in the foronate. Sex ratio was 918. (Chart No 34)

Chart No 34 : Sex-wise distribution of the population

## Age-wise distribution of the total population

The total population was categorized into 7 groups as given in the Table No. 35. It was reported that the largest group with $34.5 \%$ was in the age group of 22-44 (13398). The next largest section ( $18.7 \%$ ) belonged to the age of group of 6-15 (7250). According to the data available, the number of senior citizens was 3057 (7.9\%). It was found that the region had a very huge section of people in productive age group of $22-59$ ( $51.65 \%$ ). Infants in the age group of $0-5$ constituted of $10.6 \%$ (4096). (Chart No 35)

Chart No 35 : Age-wise distribution of the total population

## Blood Groups

Table 36 deals with the distribution of persons according to their blood group. It was noted that $72.33 \%$ of the population in the Foronate did not know their blood group. Among those who knew, the largest section constituted of $8.13 \%$ (3154) of persons having O+ve (O Positive), followed by persons with B+ve (6.09\%), A+ve (4.77\%), O-ve (1.30\%), AB+ve (1.27\%), B-ve (0.96\%) and A-ve (0.92\%) and AB-ve (0.39\%). (Chart No 36)

Chart No 36 : Blood Groups

A good percentage of the respondents in the Thoothoor region did not know their blood group and so has not been part of any initiative of blood testing and blood donation.

## Blood Groups of persons in the age group 18-45

Persons in the age group of 18-45 were separately considered as it was the most eligible group to donate blood. Therefore, their prevalence in the region was specially analyzed. Table No 36a presents the findings. The persons in the said age group consisted of 18490 respondents in the region. A careful examination revealed that among the members of this group, the same pattern of distribution as the general population was found with a slight interchange between $A B+v e$ and $O$-ve. The largest section constituted of $10.14 \%$ (1874) of persons who had $O+v e$ (O Positive), followed by persons with B+ve (7.62\%), A+ve (6.30\%), AB+ve (1.64\%), O-ve (1.56\%), B-ve (1.30\%) and $A$-ve (1.11\%) and $A B$-ve ( $0.419 \%$ ) 67\% of people in this age group did not know their blood group. (Chart No 36a)

Chart No 36a: Blood Groups of persons in the age group 18-45

Among the members of this group, the percentage of respondents who did not know their blood group decreased from $72.33 \%$ to $66.55 \%$ (18-45 age group).
The percentage of respondents increased with regard to all blood groups.

## Marital status

The marital status of total number of respondents in Thoothoor forane was examined in the survey and is presented in Table No.37. Of the total population, $47.11 \%$ (18274) were married, while $47.35 \%$ (18366) were unmarried. Widows (998-02.57\%) were far more than widowers ( $286-0.74 \%$ ) in the Foronate. There was a slight difference between the number of wives abandoned by husbands (48-0.12\%) and the number of husbands abandoned by wives ( $42-0.11 \%$ ). 301 persons ( $0.78 \%$ ) were found living together without a valid marriage. Only a very small number of persons $(0.07 \%)$ got legal divorce from the Church. (Chart No 37)

Chart No 37 : Marital status

## Life Status

The survey tried to categorize the respondents according to various positions they held in their current life. According to the details given in Table No.38, students currently studying in various levels constituted of the largest section with $27.33 \%$ (10601), followed by the unemployed persons (26.96\%), workers ( $23.82 \%$ ), children before the school age ( $7.09 \%$ ), employed persons ( $5.58 \%$ ), the dropout students who are neither job aspirants, nor workers, nor the unemployed ( $3.17 \%$ ) and job-aspirants ( $2.24 \%$ ). The smallest sections were social workers ( $0.29 \%$ ), priests/nuns ( $0.19 \%$ ) and seminarians/aspirants ( $0.15 \%$ ). (Chart No 38)

Chart No 38 : Life Status

A substantial percentage of persons were found to be unemployed in the region. This is a case for concern. Workers in the unorganized sectors were $23.82 \%$. This is a huge share of population below the lower middle class.

It was noted that the percentage of seminarians/aspirants was less than that of the priests/nuns. The trend shows the decline in vocations.

## Educational Qualifications

The current status of education of the respondents as shown in Table No. 39 was analyzed. An alarmingly high percentage of respondents consisted of the illiterate, persons not studying and the mere literate ( $30.95 \%$ ) amounting to 12003 persons. The largest section of respondents studied in the High Schools (14.41\%). But it was noted that there was a steep decline of students in Higher Secondary courses (8.03\%). This trend was found followed from Lower Primary levels to the upper levels of higher education up to M.Phil/ Ph.D. Only 1.91\% (740) students are currently in non-technical professional courses and $0.89 \%$ (347) of respondents in technical courses. It was also found that some youth preferred to go for graduate Diploma courses (1.03\%). (Chart No 39)

Chart No 39 : Educational Qualifications

The reasons for the higher rates of the unemployed persons in the foronate could be found in this statistics. Substantial numbers did not have any education. Many students did not reach the eligible levels for gainful employment. The educated ones were merely in formal general education levels. Technically and professionally educated persons were numerically very much limited.

## Educational Qualifications of the Unemployed

Further analysis was conducted to probe the relationship between education and employment or unemployment. The attempt was to find out if the educated persons were employed and if the levels of education were related to unemployment. The present Table No.39i analyzed the distribution of this section. Among the unemployed, $41.92 \%$ (4384) were either illiterate, or persons not studying or mere literate who were not eligible for an employment in the organized sector. $38.07 \%$ (3981) of the section had only High School education or below high school level. The next considerable section was found having Higher Secondary and Degree levels of education (14.55\%). It was found that only $3.81 \%$ (1521) of the unemployed persons had higher and technical education and still did not have any gainful employment in the organized sector. (Chart No 39i)

Chart No 39i : Educational Qualifications of the Unemployed

Education was found to be closely related to employment.

## Educational Qualifications of the Employed

Further analysis was done on the education status of the employed $5.58 \%$ (2165) of respondents. Table No.39ii reports that only $12.93 \%$ (280) of the employed respondents were the illiterate, those not studying and mere literates. A higher percentage of persons (17.51\%) having education up to High School were employed (379). Still higher percentage of persons ( $24.11 \%$ ) having further education of HSS and Degree levels were reported employed (522). The highest percentage of employed respondents ( $41.89 \%$ ) was found among this group with 907 persons. (Chart No 39ii)

Chart No 39ii : Educational Qualifications of the Employed

Higher the education level, better the chances of getting employment.

## Sex wise educational qualifications of the persons in the age group of 5-15

In the age group of 5-15 years, the largest section ( $29.71 \%$ ) had education up to the level of Upper Primary School with more boys ( $15.23 \%$ ) than girls ( $14.47 \%$ ). The next largest section ( $24.90 \%$ ) of children had High School level of education with more boys ( $13.02 \%$ ) than girls ( $11.88 \%$ ). Those who had Lower Primary level of education consisted of 11.36 \% of which $6.18 \%$ were boys and $5.17 \%$ girls. Others in the age group were either illiterate, mere literate or those who were not studying. (Table No.39a)

Chart No.39a : Sex wise educational qualifications of the persons in the age group of 5-15 years

Boys stood above the girls in school education in Thoothoor Foranate in the age group of 5-15. The data also is pointer to the possibility that the school dropout problems started during a period of High School levels.

## Sex-wise distribution of educational qualifications in the age group of 1625 years

In the age group of 16-25 years (Table No. 39b), it was found that the largest section (21.64\%) had education up to the level of Higher Secondary School (HSS). Here girls (12.57\%) outnumbered boys (9.07\%). The next largest section (18\%) got education up to the level of Degree, with more women (11.06\%) than men (6.94\%). A sizeable section ( $17.92 \%$ ) studied up to high school and might have dropped out of school, as observed earlier. Of them men $(9.25 \%)$ were more than women ( $8.67 \%$ ). It was noted that a substantial percentage of persons ( $10.51 \%$ ) in the age group was mere literate, who never had a chance to go to school. Men (6.13\%) were more than women (4.38\%) among them.

In the age of 16-25 years, more women received higher education above the level of HSS, Degree, PG and professional and courses. However, the size of the population in the age group, which received professional, technical and PG levels of education was not encouraging.

Chart No.39b: Sex-wise distribution of educational qualifications in the age group of 16-25 years

## Sex-wise distribution of educational qualifications in the age group of 2635 years

In the age group of $26-35$ years(Table No. 39c), the mere literates ( $19.35 \%$ ) were the largest section with more men (10.76\%) than women ( $8.59 \%$ ), followed by those with high school education ( $17.52 \%$ ) with more women (10.22\%) than men (7.30\%). Those with Upper Primary education constituted $13.76 \%$ with $8.04 \%$ men and $5.72 \%$ women. The next sizeable section ( $9.25 \%$ ) had HSS education with more women ( $5.77 \%$ ) than men ( $3.48 \%$ ) followed by degree holders ( $7.40 \%$ ) with more females ( $4.18 \%$ ) than males $(3.21 \%)$. PG degree holders were only $4.10 \%$ with $2.21 \%$ women and $1.90 \%$ were women.

Chart No.39c : Sex-wise distribution of educational qualifications in the age group of 26-35

The age group under discussion (26-35) constituted mostly of the adult members of the family who were responsible for managing the income and other affairs of the family and the most productive group in terms of age. However, this group was dominated by a substantial section of people with low levels of education which might not have helped them to reach a respectable and dignified job and income.
It can also be noted that in general the above three catagories had a stable proportion of technically and professionally qualified and post graduate persons, though their size was comparatively low.

## Medium of Instruction opted for school education

Table No. 40 reveals the distribution of medium of instruction among persons who had a chance to go to school in their life time in Thoothoor foronate. According to the data available, the majority of respondents (66.30\%) opted for Tamil vernacular language for studies in the school. Almost an equal percentage of respondents went for Malayalam (12.89\%) and English (12.63\%). (Chart No 40)

Chart No 40 : Medium of Instruction opted for school education

A clear preference for Tamil over Malayalam was visible. But, preference for English Medium was not noted.

## Sex-wise distribution of Medium of Instruction for education in the age group of 5-15 years

In the age group of 5-15 years (Table No. 40a), majority of the students preferred Tamil to English and Malayalam in Thoothoor Foranate. This section was dominated by $29.67 \%$ of men and $28.44 \%$ of women. However, a substantial percentage of students ( $29.31 \%$ ) opted for English language as a medium of instruction in the school levels, with more boys ( $15.85 \%$ ) than girls ( $13.45 \%$ ). Malayalam was selected by smaller percentage of students in the area (10.73\%)

Chart No.40a: Sex-wise distribution of Medium of Instruction for education in the age group of 5-15 years

When the sex-wise preference was considered, it was noted that while more girls than boys chose Malayalam as their medium, more boys than girls chose Tamil and English.

## Sex-wise distribution of medium of instruction of the age group 16-25 years

Tamil was preferred by more proportion of persons ( $69.34 \%$ ) in the age group of 16-25 years with more men $(35.45 \%)$ than women ( $33.89 \%$ ). As a result, those who chose English shrank to $15.28 \%$, of which $7.16 \%$ males and $8.12 \%$ females. Malayalam was chosen by $12.52 \%$ with more women ( $6.52 \%$ ) than men ( $5.68 \%$ ). Hindi did not attract the people. (Table No. 40b),

Chart No. 40b : Sex-wise distribution of Medium of Instruction for education in the age group of 16-25 years

In this age group of 16-25 years, more percentage of women chose English medium than men.

## Sex-wise distribution of the medium of instruction in the age group of 2635 years

In the age group of 26-35 years (Table No. 40c), the size of the population who opted for Tamil (74.54\%) went higher with more men $(39.90 \%)$ than women ( $34.63 \%$ ). While the percentage of people who preferred English became smaller ( $5.54 \%$ ), the size of the section that chose Malayalam was bigger with $14.48 \%$.

Chart No.40c : Sex-wise distribution of the medium of instruction in the age group of 26-35 years

It was clear from the analysis that the younger generation and their parents went for English Medium education than the older generation. In the region, as an influence of the neighboring state of Kerala, a good number of persons still preferred Malayalam to Tamil and English.

## Subjects opted for studies after Plus Two

Analysis was done for the total population of 38786 and presented in Table No.41. Excluding 82.30\% (31920) of persons who did not have any chance to study up to Plus Two level, among the others, more respondents opted for Science subjects (2.96\%-1148), Engineering subjects (2.11\%-817), commerce (2.04\%-793) and other subjects included in professional courses (1.23\%-478). (Chart No 41)

Chart No 41 : Subjects opted for studies after Plus Two

It was noted that most of the concernerd respondents in this section opted for employable subjects for their higher studies.

## Sex-wise distribution of subjects for study of the age group of 16-25 years

Age group of 16-25 years (Table No. 41a), it was noted that for a large section of $62.36 \%$ of the people, the question was not applicable since they might not gone above Xth class. (Options began from Plus Two education). An analysis of the remaining persons revealed the ascending order of preference from Science subject (7.19\%) with more women ( $5.18 \%$ ) than men ( $2.01 \%$ ), Engineering ( $7.11 \%$ ) with more men ( $4.21 \%$ ) than women ( $2.89 \%$ ), commerce $(5.70 \%)$ with more women $(3.65 \%)$ than men ( $2.05 \%$ ). People who opted for Arts ( $1.91 \%$ ), Literature (1.80\%), Diploma (1.70\%), ITI trades (1.53\%) and other subjects were very few.

Chart No.41a : Sex-wise distribution of subjects for study of the age group of 16-25 years

In this age group (16-25), very small percentage of people chose medicine in comparison with Engineering. Females showed more preference for Commerce, Science, Arts, Literature and medicine than males. But, higher percentage of males opted for Engineering than females.

## Sex-wise distribution of the subjects for study of the age group of 26-35 years

In the age group of $26-35$ years (Table No. 41b), a vast majority of people ( $75.48 \%$ ) did not have education above Plus Two where subject option was compulsory. Among the remaining population, science (4.55\%), Engineering $(3 \%)$, commerce ( $2.61 \%$ ), Diploma ( $1.47 \%$ ), Literature ( $1.30 \%$ ) and arts ( $1.25 \%$ ) were the preferred subject areas. $2.39 \%$ of people in the age group went for other professional subjects than the listed ones.

Chart No.41b : Sex-wise distribution of subjects for study in the age group of 26-35 years

Women showed more interest in science, arts and literature, while men shoed more interest in Engineering and ITI trades.

## Preferred Education Institutions

The survey looked into the distribution of educational institutions which the respondents opted for their studies. The options included State-aided institutions which were managed by private individuals or organizations but financially supported by Governments, State unaided institutions managed by private individuals or organizations but following State syllabus, purely State Government institutions, CBSC and ICSE. The results are presented in Table No. 42. The preference of the respondents was found to be in the order of State-aided institutions (39.92\%), State unaided institutions (10.28\%), State Government institutions (5.35\%), CBSC (0.65\%) and ICSE (0.17\%). (Chart No 42)

Chart No 42 : Preferred Education Institutions

Majority of the persons depended on state aided institutions.

## Sex-wise distribution of the educational institutions preferred by the age group of 5-15 years

In the age group of 5-15 years (Table No. 42a), largest section of students (46.40\%) preferred State Aided institutions for their education with $23.31 \%$ of boys and $23.09 \%$ of girls. The next important type of institutions preferred by a sizeable percentage of children (19.70\%) was State un-aided institutions with more boys (10.78\%) than girls $(8.92 \%)$. State Government institutions were chosen by $6.28 \%$ of the age group population with almost equal sex-wise preference. Smaller sections chose CBSE and ICSE. The question was not applicable to $23.25 \%$ of people in the group.

Chart No.42a : Sex-wise distribution of the educational institutions preferred by the age group of 5-15 years

State aided institutions were chosen by more persons of this age group in the Thoothoor Forane. Sex-wise differences were not much with regard to the selection of educational institutions by the members of this age group.

## Sex-wise distribution of the educational institutions preferred by the age group of 16-25 years

When the higher age group of 16-25 years was analyzed (Table No. 42b), the largest section (48.94\%) chose State aided institutions with $25.22 \%$ females and $23.72 \%$ males. Those who chose state unaided institutions were $12 \%$ with $6.11 \%$ females and $5.89 \%$ males. The next larger section ( $7.19 \%$ ) constituted by $3.64 \%$ females and $3.55 \%$ males preferred State Government Institutions. CBSE and ICSE instituttions were selected by fewer numbers of persons in the age group. For $29.16 \%$ of the member of this group, the question was not applicable since they did not study in any of the educational institutions.

Chart No.42b : Sex-wise distribution of the educational institutions preferred by the age group of 16-25 years

In the sex-wise analysis it was noted that females were more in percentage in the preference of all the three types of institutions such as State Aided, State unaided and State Government.

## Sex-wise distribution of the educational institutions preferred by the age group of 26-35 years

When the age group of $26-35$ years was analyzed (Table No. 42c), the largest section ( $45.01 \%$ ) chose State aided institutions with $23.56 \%$ men and $21.45 \%$ women. Those who chose state unaided institutions were $7.79 \%$ with $4.40 \%$ males and $3.39 \%$ females. The next larger section (5.84\%) constituted by $3.09 \%$ males and $2.77 \%$ females preferred State Government Institutions. CBSE and ICSE intuitions were selected by fewer numbers of persons in the age group. For a large section of the group (39.07\%), the question was not applicable since they did not study in any of the educational institutions.

Chart No.42c : Sex-wise distribution of the educational institutions preferred by the age group of 26-35 years

The elders preferred state aided institutions during their study time. In the sex-wise analysis it was noted that females were slightly less in percentage in the preference of all the three types of institutions such as State Aided, State unaided and State Government.

## Employment Sectors

Table No. 43 suggested the distribution of employees according to their sectors of employment. Diverse sectors were considered for analysis such as those employed in State Government, those employed in Public sector, those employed in private non-service sector, those employed in private service sector, those self-employed in firms, wage labour, fishing and agriculture, those employed in other States, those employed in Gulf countries, those employed in Europe and those employed in other foreign countries. It was found that the largest section of the employed respondents were in the self-employed sector ( $23 \%$ ) which included wage labour, fishing and agriculture. When $69.08 \%$ of the total population who were not employed and $2.58 \%$ of persons about whom no information was available were excluded from further analysis, of the remaining, $7.52 \%$ of persons were spread in various sectors such as private non-service sector (2.24\%), Gulf countries ( $2.24 \%$ ), state government (1.17\%), other States $(0.99 \%)$, other foreign countries ( $0.54 \%$ ), private service sector ( $0.39 \%$ ), Public sector ( $0.29 \%$ ) and other foreign countries (0.06\%). (Chart No 43)

## Chart No 43 : Employment Sectors

The sectoral picture of employment of the respondents was found very disheartening with very small percentage of persons was employed and those employed were not in recognizable and rewarding positions.

## Sex-wise distribution of employment sectors in the age group of 18-28 years

In this age group of 18-28 years (Table No. 43a),, as per the data available, it was found that the largest section $(24.52 \%)$ with a huge proportion of males ( $23.52 \%$ ) and minute space occupied by women ( $1 \%$ ) was self-employed in various businesses. There were $4.25 \%$ employed in non-service private sector with more men ( $2.57 \%$ ) than women (1.68\%). The next considerable section was employed in Gulf countries ( $2.79 \%$ ) with $2.62 \%$ males and $0.17 \%$ females. There were some people employed in other states in various sector ( $1.46 \%$ ). Private Service sector absorbed a negligible percentage of persons in the group. $62.33 \%$ of the members of this group were not employed at all because they said that this question was not applicable to them.

Chart No 43a : Sex-wise distribution of employment sectors in the age group of 18-28 years

It can be construed from the situation that the employment meant that they were employed in the non-formal sector with diverse occupational engagements.

## Sex-wise distribution of employment sectors in the age group of 29-35 years

In the age group of 29-35 years (Table No. 43b), the same trend continued as it was found in the earlier age group. The largest section of members in the age group ( $46.07 \%$ ) said that the question was not applicable. Among the employed, $36.14 \%$ reported that they were self employed. Of them, a vast majority was men ( $34.66 \%$ ) and only $1.47 \%$ was females. There were $5.22 \%$ employed in non-service private sector with more men (3.76\%) than
women (1.46\%). The next considerable section was employed in Gulf countries ( $5.81 \%$ ) with $5.42 \%$ males and $0.39 \%$ females. There were some people employed in other states in various sector (1.58\%). A smaller proportion of people were employed in State Government direct positions (1.17\%). Among them males ( $0.69 \%$ ) were more than the females ( $0.47 \%$ ). Private Service sector absorbed a negligible percentage of persons in the group.

Chart No.43b : Sex-wise distribution of employment sectors in the age group of 29-35 years

Among the unemployed, the share of women was very huge in comparison with men. Among the employed also, men fared better.

## Sex-wise distribution of employment sectors in the age group of 36-60 years

In the age group of 36-60 years (Table No. 43c), almost the same trend continued as it was found in the earlier
age group. The largest section of members in the age group ( $45.84 \%$ ) said that the question was not applicable. Among the employed, $41.22 \%$ reported that they were self employed. Of them, a vast majority was men (37.76\%) and $3.46 \%$ was females. The next considerable section was employed in Gulf countries ( $3.10 \%$ ) with $2.97 \%$ males and $0.1 \%$ females. $2.74 \%$ of people in the age group were employed with State Government direct organizations with almost equal percentage of men and women. There were $2.32 \%$ employed in non-service private sector with more men $(1.71 \%)$ than women $(0.62 \%)$. There were some people employed in other states in various sectors (1.38\%). Private Service sector absorbed a negligible percentage of persons in the group.

Chart No.43c : Sex-wise distribution of employment sectors in the age group of 36-60 years

The size of the unemployed persons remained the largest in this age group also. Of the remaining the so-called self employed persons were on the top in percentage. Women were found behind in all areas of employment except in the case of state government direct employees.

## Career Sectors/ employment positions

Table No. 44 discusses the situation of respondents in their careers and employment positions. A long list of 32 positions/careers as seen in the said Table No. 44 n were considered for the purpose of measuring the space occupied by the respondents in these positions. It was disappointing to find that the percentage of respondents in recognizable or respectful positions and careers were clearly insignificant. Barring the majority ( $56.74 \%$ ) of unemployed persons, it was found that $22.37 \%$ were fishermen and $7.11 \%$ were house managers. 408 (1.05\%) was fish vendors in the region. Thoothoor forane had only 295 ( $0.75 \%$ ) engineers and 41 Gazette officers ( $0.11 \%$ ) of the total respondent population and only 30 medical doctors ( $0.08 \%$ ). (Chart No 44)

Chart No 44 : Career Sectors/ employment positions

The finding that very tiny percentage of persons was engaged in good positions and careers was not an encouraging message.

## Sex-wise distribution of Career positions of the age group 18-28 years

In the age group 18-28 years (Table No. 44a), the career positions among the members of the group were considered for analysis. Among them the simple majority of $51.39 \%$ of people were jobless. Of the remaining, the largest section was fish workers ( $26.10 \%$ ) with a huge proportion of men $(25.75 \%)$ and a small proportion of women ( $0.35 \%$ ). The next prominent section was house managers ( $8.03 \%$ ) with almost the entire space occupied by women. Engineers, Teachers, IT professionals and wage labourers were comparatively negligent in percentage. $2.93 \%$ of people were employed in other careers than those mentioned in this survey.

Chart No.44a: Sex-wise distribution of Career positions of the age group 18-28 years

Chart No. 44b : Sex-wise distribution of Career position of the age group 29-35 years

## Sex-wise distribution of Career position of the age group 29-35 years

In the age group 29-35 years (Table No. 44b), the career positions among the members of the group were considered for analysis. Among them a large section (30.18\%) of people was jobless. Of the remaining, the largest section was fish workers ( $26.10 \%$ ) with a huge proportion of men ( $25.75 \%$ ) and a very small proportion of women $(0.35 \%)$. The next prominent section was house managers ( $12.97 \%$ ) with almost the entire space occupied by women. There were $1.66 \%$ of people self-employed and $1.58 \%$ of wage labourers.

Engineers, Teachers, IT professionals, Managers, Accountants, drivers, technically skilled persons were found among the members of the age group in smaller proportions. Clerks, nurses, priests and nuns were there in the Foranate, but in smaller numbers. Nuns were found more than priests in number. $4.01 \%$ of people were employed in other careers than those mentioned in this survey.

## Sex-wise distribution of Career position of the age group 36-60 years

Among the members of the age group 36-60 years (Table No. 44c), a largest section ( $45.75 \%$ ) consisted of clerks with a vast majority of women ( $38.91 \%$ ) and $6.84 \%$ of men. Teachers were the next largest category.

Chart No.44c : Sex-wise distribution of Career position of the age group 36-60 years

## Diseases

Health is an important indicator of wellbeing and progress of individuals and communities. The survey examined the distribution of respondents according to their diseases. Table No. 45 reported the spread and size of such distribution. It was found that $30.59 \%$ of respondents were affected by one or the other disease. Five major ailments found among the respondents were Rheumatic (among 3.89\% respondents), Blood Pressure (2.97\%), Dengue and Chicken guinea ( $2.51 \%$ ), Asthma ( $2 \%$ ) and heart problems (1.67\%). $69.41 \%$ (27580) did not have any disease.
(Chart No. 45)

## Chart No 45 : Diseases

## Sex-wise distribution of diseases in the age group of 0-6 years

The age group of 0-6 years consisted of infants (Table No 45a). Among them, $80.21 \%$ were free from any of the listed diseases in general. Of the remaining, dengue/CG affected $5.07 \%$ with boys and girls with almost equal proportions. The next significant section of children in the group (2.52\%) was affected by Asthma. Allergy, skin diseases and heart problems were found among a negligible section of children.

Chart No.45a : Sex-wise distribution of diseases in the age group of 0-6 years

## Sex-wise distribution of diseases in the age group of 7-15 years

The age group of 7-15 years consisted of small children and adolescents (Table No 45b). Among them, $81.96 \%$ were free from any of the listed diseases found among people in general. Of the remaining, dengue/CG affected $3.14 \%$ with more boys and than girls affected by it. The next significant section of children in the group ( $1.65 \%$ ) was affected by Asthma. Allergy, skin diseases, bone problems, thyroid and heart problems were found among a negligible section of children.

Chart No.45b : Sex-wise distribution of diseases in the age group of 7-15 years

## Sex-wise distribution of diseases in the age group of 16-35 years

The age group of 16-35 years consisted of young men and women (Table No 45c). Among them, 71.17\% reported that they were free from any of the listed diseases found among people in general. Of the remaining, dengue/CG affected $2.09 \%$ with almost equal proportion of men and women affected by it. Allergy, skin diseases, bone problems, thyroid, B P, Asthma and heart problems were found among a negligible section of people.

Chart No. 45c : Sex-wise distribution of diseases in the age group of 16-35 years

## Sex-wise distribution of diseases in the age group of 36-60 years

Among the members of the age group of 36-60 years (Table No 45d). $53.13 \%$ reported that they were free from any of the listed diseases found among people in general. Of the remaining, increasing percentages of people were affected by more diseases than as reported in the earlier age group. The diseases and the percentage of persons affected by these diseases and their sex-wise distribution are found as follows: Rheumatic (8.15\%) with more women $(4.68 \%)$ than men $(3.46 \%)$, BP $(6.76 \%)$ with more females $(4.03 \%)$ than males $(2.73 \%)$, heart problems ( $3.34 \%$ ) with more females ( $1.70 \%$ ), diabetic ( $3.25 \%$ ) with equal percentage of men and women, Bone diseases (3.05\%) with more males than females, Asthma (2.87\%) with more females (2.07\%) than males ( $0.81 \%$ ), dengue/CG (1.70\%) with more females ( $0.90 \%$ ) than males ( $0.83 \%$ ), Allergy ( $1.52 \%$ ) with more females than males, thyroid $(1.19 \%)$ with almost total women affected by it, skin $(1.15 \%)$ with more males than females, T B $(1.11 \%)$ with more males than females. Psychic disorders, Cancer, Jaundice, Malaria, verocos and leprosy were found among the members of this group in very small percentages.

Chart No. 45d : Sex-wise distribution of diseases in the age group of $36-60$ years

It was found that more females of this age group were affected by most of the diseases. Life style diseases were found more prevalently in the area among the members of this group.

## Sex-wise distribution of diseases in the age group above $\mathbf{6 0}$ years

Among the members of the age group above $\mathbf{6 0}$ years (Table No 45e). $32.86 \%$ reported that they were free from any of the listed diseases found among people in general. The diseases and the percentage of persons affected by these diseases and their sex-wise distribution are found as follows: Rheumatic (19.06\%) with more men ( $10.58 \%$ ) than women ( $8.48 \%$ ), BP (12.55\%) with more females ( $7.18 \%$ ) than males ( $5.37 \%$ ), diabetic ( $6.29 \%$ ) with more men $(3.52 \%)$ than women $(2.78 \%)$, Asthma ( $4.74 \%$ ) with more females ( $2.78 \%$ ) than males ( $1.96 \%$ ), heart problems (4.07\%) with more males than females, bone diseases ( $2.85 \%$ ) with more females than males, dengue/CG (1.92\%) with more females than males. Allergy, thyroid, skin, T B, psychic disorders, cancer, jaundice, malaria, verocos, elephanticities, HIV/AIDS and leprosy were found among the members of this group in very small percentages.

Chart No.45e : Sex-wise distribution of diseases in the age group above 60 years

Among the members of the age group above 60 years, life style diseases dominated as among the earlier age group members. Male's outnumberd in mental retardation, psychic problems, allergy, rheumatic, Vericos veins, skin diseases, leprosy, malarias, jaundice, cancer, diabeties and heart problems

## Bad habits

The survey tried to catch the trend in bad habits of the respondents. Table No. 46 contains the distribution pattern. Accordingly, a good majority ( $78.74 \%$ ) reported that they did not have any bad habits. Of the remaining $21.26 \%, 10.66 \%(4413)$ were found to be having alcohol consumption as a habit. Some respondents said that they had the bad habit of betel leaf chewing ( $8.12 \%$ ), while some others said that they had tobacco smoking as a habit (1.39\%). Pan Masala and Pan Parag were consumed by $0.90 \%$ ( 371 ); 76 ( $0.18 \%$ ) persons were involved in drug abuse. (Chart No. 46)

## Chart No. 46: Bad habits

Further scientific enquiries were required to validate the claim of the $78.74 \%$ of respondents who reported that they had no bad habits. The bad habits others had were very serious and the size was not negligible.

## Sex wise distribution of bad habits in the age group of 5-15 years

In the age group of 5-15 years (Table No 46a), a vast majority of the children (99.74\%) were free from any of the listed bad habits. It was, however, alarming to note that 22 children, with 11 girls and 11 boys had one or more of the listed bad habits.

Chart No.46a: Sex wise distribution of bad habits in the age group of 5-15 years

## Sex wise distribution of bad habits in the age group of 16-25 years

A vast majority of the members of the age group of 16-25 years were reportedly free from any of the bad habits. Of the remaining, $1.81 \%$ had alcohol drinking as their bad habit with almost entirely males. While some of the group members $(1.29 \%)$ had betel chewing with more males, some others had pan masala consumption ( $0.56 \%$ ). A very small percentage of members had drug abuse and smoking. (Table No 46b)

Chart No. 46b : Sex wise distribution of bad habits in the age group of 16-25 years

The percentage of people who had bad habits increased with the increase in age.

## Sex-wise distribution of bad habits in the age group of 26-60 years

Majority of the members of the age group of 26-60 years (63.92\%) reported that they did not have any of the bad habits (Table No 46c). Drinking was the major bad habit the largest section of remaining persons in the age group had ( $18.30 \%$ ) with a vast majority of men ( $18.01 \%$ ). The next bad habit in the descending order was betel leaf chewing $(13.62 \%)$ with a vast majority of men (12.86\%), followed by smoking ( $2.25 \%$ ) with entirety of males and drug abuse (0.29\%) .

Chart No.46c : Sex-wise distribution of bad habits in the age group of 26-60 years

In the age group of 26-60 years, the percentage of people who had developed bad habits increased steeply from the earlier age group from $4.10 \%$ to $36.08 \%$ with difference of 31.98 percentage points.
Considering that this is the most productive age group, more number of them becoming addicted to serious bad habits which may invite life style disease like cancer is a case for concern.

Except in betel leaf chewing, males outnumbered females in bad habits.

## Sex wise distribution of bad habits in the age group above $\mathbf{6 0}$ years

In the age group above 60 years (Table No 46d), it was found that drinking continued to be the most popular bad habit ( $22.12 \%$ ) especially among men. $18.61 \%$ of the members of the age group had betel leaf chewing with more men ( $15.04 \%$ ) than women ( $3.57 \%$ ). Smoking was another serious bad habit men had ( $3.91 \%$ ). A small portion of people had pan masala consumption and drug abuse. In this age group, $55.16 \%$ of persons did not have any of the bad habits.

Chart No. 46d: Sex wise distribution of bad habits in the age group above 60 years

Alcohol consumption and betel leaf chewing and smoking were found to be the major bad habits the people of the forane had. Mostly male members were affected by them. The bad habits increased with increase in age.

## Disabilities

The survey included the subject of disabilities to find out the size and type among the respondents in Thoothoor foronate. Data regarding 11 disabilities as given in Table No. 47 were collected in the survey. The data showed that only $4.68 \%$ of the respondents had one or the other of the disabilities. Partial vision $(1.88 \%)$, hand or leg amputated $(0.64 \%)$, lame ( $0.41 \%$ ), blind ( $0.36 \%$ ), growth impaired ( $0.27 \%$ ), reading difficulties ( $0.22 \%$ ), deaf $(0.21 \%)$, studering $(0.16 \%)$, dump $(0.15 \%)$, pronunciation difficulties ( $0.12 \%$ ) were the identified types. (Chart No 47)

Chart No 47 : Disabilities

## Involvement in Church and other social organizations

Distribution of the respondents according to their membership/affiliation/ association with faith based/ secular organizations was tabled in Table No.48. It was surprisingly noted that $80.78 \%$ of the respondents had not part of any of the 17 types of organizations listed in the table. Some of the organizations in which the respondents were some kind of association were Pious Associations of the Church (6.26\%), Basic Christian Communities (3.38\%), Fishermen Forum (3.26\%) and Self Help Groups (2.16\%). (Char No 48)

Chart No 48 : Involvement in Church and other organizations

Since membership, association or affiliation of a person with any of the social or faith based organizations is considered as a sign of civic sense, social contacts and proactive personality, the small percentage of persons with such associations is a case for concern.

## Sex-wise involvement in faith-based and social organizations of the age group of 18-60 years

It was noted that $74.19 \%$ of the members of the age group were not associated with any of the faith-based or social organizations in the Thoothoor Foranate. Of the remaining, the largest section was associated with pious organizations ( $7.05 \%$ ) with more females ( $5.36 \%$ ) than males ( $1.70 \%$ ). $4.97 \%$ of them became members or associates with fishermen forum with vast majority of men ( $4.51 \%$ ). BCC was another organization in which $4.99 \%$ were associated. Majority of them were females ( $3.76 \%$ ). $2.77 \%$ were females out of the total members in the SHGs $(3.31 \%)$. Catechism teachers' groups, vanitha vedi, prayer groups, fish vending women's forum and KCYM had very little influence on the members of the age group. (Table No 48a)

Chart No.48a : Sex-wise involvement in faith-based and social organizations of the age group of 18-60 years

If the data can be relied on, it is disturbing to note that very small percentage of people in the vital age group were associated with social and faith-based organizations in the Forane. This has implications on their social life, development of social capital, church-based social involvements, which are necessary for personal and social development.

## Sex-wise Involvement in Faith-based and social organizations among the members of the age group above $\mathbf{6 0}$ years

Among the members of the age group above 60 years (Table No 48 b ), $74.91 \%$ of members were not involved in the activities of the faith-based or social organizations listed in the survey. Of the remaining, the largest section ( $13.24 \%$ ) of respondents with more females ( $8.87 \%$ ) than males ( $4.37 \%$ ) was members of pious associations. $2.65 \%$ of members were associated with fishermen forum, while $3.11 \%$ were linked with BCCs. Females were more than males in this regard. $1.64 \%$ of members were involved in SHGs with more females. Vanitha vedi, prayer groups and catechism teachers groups were the other platforms some a few people were associated.

Chart No 48b: Sex-wise Involvement in Faith-based and social organizations among the members of the age group above 60 years

## FAITH LIFE OFINDIVIDUALS

Three indicators were included in the survey to measure the faith life of the individual respondents. Participation in Holy Mass, participation in Catechism class and participation in the sacrament of reconciliation were selected for the purpose.

## Participation in Holy Mass

According to Table no.49, the majority (64.43\%) of respondents used to go for Holy Mass on a weekly basis, may be, for the Sunday Obligation Mass. 18.97\% went for Holy Mass daily and $12.79 \%$ went for Holy Mass $2-3$ days in a week. While $1.54 \%$ went for Holy mass once in a year, $1.10 \%$ never went for Holy Mass. (Chart No.49)

Chart No. 49 : Participation in Holy Mass

## Sex-wise participation in Holy Mass in the age group between 5-18 years

In the age group between 5-18 years (Table No 49a), majority of the members ( $55.72 \%$ ) reported that they went for weekly Holy Mass, with more men ( $30.98 \%$ ) than women ( $24.73 \%$ ). $27.08 \%$ of persons went for daily mass with more females ( $14.68 \%$ ) than males ( $12.40 \%$ ). The other significant section ( $15.37 \%$ ) went for Holy Mass $2-3$ days a week with more females ( $8.32 \%$ ) than males ( $7.05 \%$ ). A very small percentage of people in this age group never went for Holy Mass or went for yearly Mass.

Chart No.49a : Sex-wise participation in Holy Mass in the age group between 5-18 years

It was found that for Sunday Mass or weekly Mass obligation men were more faithful, while more women went for daily Mass or Mass once in 2-3 days.

## Sex-wise participation in Holy Mass in the age group between 19-60 years

In the age group between 19-60 years (Table No 49b), majority of the members ( $68.24 \%$ ) reported that they went for weekly Holy Mass, with more men (40.82\%) than women ( $27.42 \%$ ). $15.68 \%$ of persons went for daily mass with more females ( $11.45 \%$ ) than males ( $4.23 \%$ ). The other significant section ( $11.98 \%$ ) went for Holy Mass 2-3 days a week with more females ( $7.48 \%$ ) than males ( $4.50 \%$ ). A very small percentage of people in this age group never went for Holy Mass ( $0.96 \%$ ) or went for yearly Mass (2.18\%).

Chart No.49b : Sex-wise participation in Holy Mass in the age group between 19-60 years

As in the earlier age group of 5-18 years, it was found that for Sunday Mass or weekly Mass obligation men were more faithful, while more women went for daily Mass or Mass once in 2-3 days in this age group of 19-60 years.

## Sex-wise participation in Holy Mass in the age group between >60 years

In the age group above 60 years (Table No 49c), a simple majority of the members ( $52.45 \%$ ) reported that they went for weekly Holy Mass, with more men ( $32.13 \%$ ) than women ( $20.32 \%$ ). $30.59 \%$ of persons went for daily mass with more females (18.79\%) than males (11.80\%). The other significant section ( $9.88 \%$ ) went for Holy Mass 2-3 days a week slightly with more females ( $5.07 \%$ ) than males ( $4.81 \%$ ). Comparatively a higher percentage of people in this age group never went for Holy Mass (4.43\%) with almost equal percentage of men and women. The size of annual Mass goers also increased (1.62\%) with equal percentage of men and women.

Chart No.49c : Sex-wise participation in Holy Mass in the age group between >60 years

The percentage of daily Mass goers increased significantly in this age group from $15.68 \%$ in the earlier age group of $19-60$ years to $30.59 \%$. When people became older they got more time for Mass. A considerable number of people shifted their frequency from weekly to daily. More women went for daily Mass while more men went for weekly Mass.

## Participation in catechism classes

Participation in catechism classes was a concern of the children and youth and so $56.05 \%$ of the total respondents were excluded from further analysis as they might be above or below the age of catechism students. No data was available for $2.46 \%$. Of the remaining $47.49 \%$, the largest section, that is, $24.67 \%$ regularly went for catechism, while $10.83 \%(4193)$ never went. $5.99 \%$ (2324) occasionally went for catechism classes (Table No.50). (Chart No. 50)

Chart No. 50 : Participation in catechism classes

## Sex-wise distribution of participation in Catechism classes among the members of the age group 5-15 years

It was reported that a good majority of children of 5-15 years old were regularly participating in catechism classes ( $78.32 \%$ ) with almost equal percentage of boys and girls. Comparatively a smaller percentage of children ( $7.27 \%$ ) went for catechism classes occasionally. $5.70 \%$ which is not a negligible size, never bothered to go for catechism classes with more boys (3.46\%) than girls (2.24\%). (Table No 50a)

Chart No.50a : Sex-wise distribution of participation in Catechism classes among the members of the age group 5-15 years

Girls were found more faithful in the case of attending catechism classes regularly.

## Sex-wise distribution of participation in Catechism classes among the members of the age group 16-25 years

It was reported that for the largest section of youth of 16-25 years (Table No 50b), catechism classes were not mandatory, may be because they got married by this time. Among them, women were more ( $18.14 \%$ ) than men (17.01\%). Those who had participated catechism classes regularly were $33.01 \%$ with more females (19.65\%) than males ( $13.36 \%$ ). Comparatively a smaller percentage of children ( $16.50 \%$ ) went for catechism classes occasionally. $13.32 \%$ of persons in the age group, which is not a negligible size, never bothered to go for catechism classes with more boys ( $8.11 \%$ ) than girls ( $5.21 \%$ ).

Chart No.50b : Sex-wise distribution of participation in Catechism classes among the members of the age group 16-25 years

It was noted that regular catechism participation was marked by more women than men. Women were found more faithful to the obligation of participating in catechism classes.

## Participation in the Sacrament of Reconciliation

Similarly, Table No. 51 deals with sacrament of confession and people's participation in it. Setting aside the children who had not taken first communion (17.30\%) and some people who did not provide information (2.09\%), it was found that $34.39 \%$ (13339) of the total respondents occasionally went for the sacrament. Only $30.50 \%$ of respondents went for yearly confession against the obligation that all the grown up Catholics are mandated to go for yearly confession. $1635(4.22 \%)$ never went for the sacrament of confession. Only $11.50 \%$ (4462) went for monthly confession.

Chart No. 51 : Participation in the Sacrament of Reconciliation

Majority of the individual members were found to be honoring the obligations of faith life to some extend with a good number of the concerned sections going for Holy Mass, youngsters going for catechism classes and a moderate section going for confession regularly. The figures do not show a totally negative trend; but the trend was not at all a positive one.

## Sex-wise participation in Confession among the members of the age group between 10-18 years

In this age group of 10-18 years (Table No 51a), those who went for the sacrament of reconciliation occassionally were $38.96 \%$, with equal size of boys and girls. The next largest section constituted of $23.73 \%$ of persons with more females ( $12.80 \%$ ) than males ( $10.93 \%$ ) made monthly confession. It was found that $21.20 \%$ made yearly confession with more boys ( $11.24 \%$ ) than girls ( $9.96 \%$ ). Those who never made Confessions constituted $1.94 \%$. $12.21 \%$ reported that the question regarding Confession was not applicable to them.

Chart No.51a : Sex-wise participation in Confession among the members of the age group between 10-18 years

Girls were slightly above boys in making confessions with reference to the age group of 10-18 years.

## Sex-wise participation in Confession among the members of the age group between 19-60 years

The percentage of people in the age group of 19-60 years (Table No 51b), who made Confession yearly and occasionally went higher to $40.58 \%$ and to $41.69 \%$ respectively. Men were more than women in both these categories. A smaller section of persons made monthly Confession ( $9.95 \%$ ) with more females ( $5.87 \%$ ) than males $(4.08 \%) .4 .47 \%$ of members never went for confession. Among them men were more than women.

Chart No.51b: Sex-wise participation in Confession among the members of the age group between 19-60 years

As in the above age groups, women were more faithful to more regular Confession than men. When the age of the people went higher, their regularity in making Confessions went lower.

## Sex-wise participation in Confession among the members of the age group above 60 years

In this age group above 60 years (Table No 51c), it was surprisingly found that the largest section (46.94\%) made only yearly Confession with more males (19.43\%) than females (17.51\%). Next largest group (35.49\%) made occasional Confessions with more females than males. Those who made monthly Confessions were a smaller section ( $15.55 \%$ ) with more females than males. $6.73 \%$ of members of this elderly group never went for Confession, which is a case for concern.

Chart No.51c:Sex-wise participation in Confession among the members of the age group above 60 years

On the whole, it was noted that most of the people made occasional Confessions or yearly Confessions. Those who made regular monthly Confessions were smaller in percentage. Among them, females were more regular than males.

In this chapter, the observations reflected from the available data were narrated in a very simple and clear manner for any lay person to understand. Tables are annexed while the corresponding charts are presented. At the end of the narrations about each topic, points for concern and attention were specially marked.

## CHAPTER 3

## SUMMARY OF FINDINGS <br> AND DISCUSSIONS

Chapter 3 highlights the major findings with regard to each of the issues identified by the survey and discusses a cause-effect relationship bringing out the root causes and impacts of the findings. The discussion is based on the logic that whatever we find in the survey has a cause and consequence. During the process, a set of recommendations relating to each of the major sectors to sustain the positive aspects and address the negative aspects are presented.

## SECTION ONE: Families

According to the survey, there were 10004 families in Thoothoor Foronate covering 8 parishes. The largest number of families (1677) live in Vallavila Parish (16.76\%), while the next largest number (1610) was found in Thoothoor Parish (16.09\%). Erayumenthurai Parish had the smallest number of families (620) in the Foronate (6.20\%). Since the Forane had a total number of 38787 persons, the family size was calculated as 3.87 . This means that the families in the region followed the general trend of reducing children. The small size of the families also points to the larger number of nuclear families. The family size is much smaller than the state average.

## Housing

In Thoothoor Forane, though a good majority of families (70.21 \%) 'owned' their houses, 24.55\% (2456) of families were found to be homeless at the Forane level.
A substantial portion of the families lived in poor houses. As many as 2334 families ( $23.33 \%$ ) lived either in huts or in thatched houses or in sheet-roofed houses which is almost equal to the number of homeless families amounting to the total of $47.88 \%$ of families whose biggest concern remained to be a good livable and durable house for their families.

A slight majority ( $52.45 \%-5247$ ) of families lived in houses having 1-4 rooms and $52.68 \%$ of families lived as 'nuclear families' in their houses without having to accommodate other families. $33.62 \%$ (3363) of families lived with 5-8 members in a house. The data did not make it clear if these members belonged to a single family or more than one family.
The data implied that 10004 families lived in 7364 houses, assuming that no family lived on the street. Friends and or relatives accommodated the homeless in their shelters.

On the whole, largest sections of families both in the Forane level and in the Parish level were found sharing one-family-one-house pattern. However, almost one third of the families lived with other families in a single house with 5-8 members.

Housing was a major issue in Thoothoor Forane in terms of number of homeless families and quality of houses, the size of families and members accommodated in a house.

## Land

Land, the most basic asset for sustainable development, remained as a matter of concern in the Foronate. The fact that landlessness was closely related to homelessness was validated by the data available from the survey. The Forane has 2270 ( $22.69 \%$ ) landless families.
In real terms, people who lived in Puramboke, Kudikidappu and Church-owned land were the landless. This meant that they were not the real owners of the land where they lived. They did not possess the full legal right over the land where they have lived for years.

Of those who said that they had some kind of land, the majority ( $56.2 \%$ ) had minimum size of land ( $0-5$ cents).
It was clear that there was a male domination in the matter of control over land. $48 \%$ families had their land registered in the name of the male adult member of the family, while only $13 \%$ registered in the name of the female member.

However, there was a need for further examination regarding the type of control and legal status of land where they lived.

## Energy Consumption

Use of non-conventional and renewable energy sources was found very limited among families in Thoothoor Foronate. While $51.1 \%$ of families used LPG, very insignificant percentage of families used solar sources or biogas for their domestic purposes.

More than one third of the total families (34\%) in the Foronate used traditional stove for cooking purpose with a potential damage to the health of women and girl children and negative impacts on environment due to use of substantial volumes of firewood.

## Economic Status

Since ownership and use of modern and more home appliances in a house is an indicator of economic status of the families, the substantial number of families not having even a fan, is a case for concern. As high as $24.32 \%$ (2433) families, that is, almost one fourth of the total families, did not own any of the listed home appliances.

Thoothoor forane was found very much lagging behind in the case of ownership of vehicles as an indicator of economic strength. A vast majority of families ( $79.87 \%$ ) did not own even a bicycle.
The fishing communities in Thoothoor forane had shockingly low asset base of fishing equipments. 79.98\% did not own any of the major fishing assets. Their investment in this regard was negligent.

A vast majority of the families in the foronate did not own any of the other items listed in the survey ( $89.68 \%$ ). All these 'other equipments' were included in the study as means of livelihood or business.

A vast majority of the families, that is, $93.61 \%$ (9365) did not have any one of the firms or shops or industry or selfemployment units.

As one may expect from any fishing community in the region, $96.08 \%$ ( 9612 ) did not have any of the crops cultivated in their land.

Around one fourth of the total surveyed families ( $24.16 \%$ ) did not have any of the listed media/publications/source of information, not even a news paper.

In Thoothoor forane, a vast majority of families ( $83 \%$ ) spent more than Rs.2000/- per month for food including the 40.74\% who spent more than Rs. 3000/- The largest section spent less than Rs. 2000/- for education. for medical care also, most people spend less than Rs. 500/- per month.

The largest section (24\%) of families spent less than Rs.2000/- per month for education of their children.
A substantial percentage of families (43\%) spent less than Rs.2000/- per month.
$70.92 \%$ (7095) of the families were indebted to one or the other way, while $29.08 \%$ (2909) reported that they did not have any debt. The largest section of families (22.69\%) had a debt of Rs.1-3 lakhs.

## Ration Cards

In Thoothoor forane a good majority of families (8082) did possess ration cards (80.79\%). But, those who did not have a ration card amounted to 1922 families (19.21\%).

## Medical Insurance

A vast majority of families ( $85.03 \%$ ) did not have a health insurance policy at the time of data collection. Only a small percentage of families (14.97\%) had medical insurance.

## Water and Sanitation

7555 families ( $75.52 \%$ ) had toilets inside their homes and $8.68 \%$ of families (868) used public toilets. It was disturbing to note that $10.21 \%$ of families (1021) used open space for defecation.
It was noted that 247 families $(2.47 \%)$ spread in all the 8 parishes purchased water from external sources. As many as 711 families ( $7.11 \%$ ) received water from other houses.

A substantial percentage of families (37.84\%) did not use safe drainage system or arranged pits.
The majority of the families (57.28\%) threw their solid waste into the sea or lake. It was noted that $10.70 \%$ (1070) used public waste box for waste disposal.

## Education

Barring 3809 ( $38.7 \%$ ) families where there was no one studying, $31.24 \%$ (3125) of families provided tables and chairs to their children for study. But, only $16.25 \%$ (1626) of the families reported that there was a proper time for study at home. The data shows that only $7.15 \%$ had text books made available to them from the beginning of the courses. Not less than $21.31 \%(2132)$ of the families did not have any of the above facilities.

## Faith Life

$74.25 \%$ (7428) of the families always had family prayer, while $17.88 \%$ (1789) prayed together with the families occasionally. It was found, however, that $7.05 \%$ (705) families never had family prayer.
A vast majority of the families ( $91.98 \%$ ) had P O C Bible in their homes.
A good majority of families (79.66\%) always participated in B C C meetings. But, 16.07\% (1608) of the families never went for B C C Meetings.

## Death within Three Years

Death did occur in a few families due to reasons such as old age (3.33\%), diseases (4.56\%), accidents ( $0.90 \%$ ), suicides ( $0.25 \%$ ), murders ( $0.03 \%$ ) and other natural reasons ( $1.35 \%$ ). Infant deaths were also reported during the specified period ( $0.75 \%$ ). Unnatural deaths were limited.
The families in the foronate taken together are weak socially and economically and stronger in the projected areas of faith life.

## SECTION TWO

## Individual members of the families

The second section of this chapter is devoted to report the information regarding the individual members of the families taken together as found in Thoothoor foranate. There were 38787 persons covered in the survey from the 8 Parishes. Sector-wise and subject-wise collection of data was carried out with regard to the members.
Valalvilai Parish has the largest population size (17.17\%). Erayumetnthurai has the lowest size (5.56\%).

## Sex-wise distribution of the population

Thoothoor Forane covering 8 parishes had a total of 38787 persons with 20222 males ( $52.14 \%$ ) and 18565 ( $47.86 \%$ ) females in 10004 families.

## Age-wise distribution of the total population

It was found that the region had a very large section of people in productive age group of 22-59 (51.65\%). Infants in the age group of $0-5$ constituted of $10.6 \%$ (4096).

## Blood Groups

A good percentage of the total respondents in the Thoothoor region (72.33\%) did not know their blood group and so has not been part of any initiative of blood testing and blood donation.
The persons in the said age group consisted of $18490(67 \%)$ respondents in the region. The same pattern of distribution as the general population was found with a slight interchange between $A B+v e$ and $O$-ve. Among the members of the group of 18-45, the percentage of respondents who did not know their blood group decreased from $72.33 \%$ to $66.55 \%$.

## Marital status

Number of married ( $47.11 \%-18274$ ) and unmarried persons ( $47.35 \%-18366$ ) were more or less the same. Unmarried persons naturally included those under the marriageable age of 21 for boys and 18 for girls. There were $286(3 \%)$ widows in the region.

## Life Status

A substantial percentage of persons were found to be unemployed in the region (26.96\%). This is a case for concern. Workers in the unorganized sectors were $23.82 \%$. This is a huge share of population below the lower middle class.

## Educational Qualifications

An alarmingly high percentage of respondents consisted of the illiterate, persons not studying and the mere literate ( $30.95 \%$ ) amounting to 12003 persons. The largest section of respondents studied up to High School level $(14.41 \%)$. But it was noted that there was a steep decline of students in Higher Secondary courses ( $8.03 \%$ ). This trend was found followed from Lower Primary levels to the upper levels of higher education up to M.Phil/ Ph.D.
Boys stood above the girls in school education in Thoothoor Foranate in the age group of 5-15. The data also is a pointer to the possibility that the school dropout problems started during a period of High School levels.
In the age of 16-25 years, more women received higher education above the level of HSS, Degree, PG and professional and courses. However, the size of the population in the age group, which received professional, technical and PG levels of education was not encouraging.

The age group under discussion (26-35) constituted mostly of the adult members of the family who were responsible for managing the income and other affairs of the family and the most productive group in terms of age. However, this group was dominated by a substantial section of people with low levels of education which might not have helped them to reach a respectable and dignified job and income.
It can also be noted that in general the people of the above three age groups had a stable proportion of technically and professionally qualified and post graduate persons, though their size was comparatively low.

## Medium of Instruction opted for school education

A clear preference for Tamil (66\%) over Malayalam was visible. But, preference for English Medium was not noted.
5-15 years: When the sex-wise preference was considered, it was noted that while more girls than boys chose Malayalam as their medium, more boys than girls chose Tamil and English.
In this age group of 16-25 years, more percentage of women chose English medium than men.
26-35 years: It was clear from the analysis that the younger generation and their parents went for English Medium education than the older generation. In the region, as an influence of the neighboring state of Kerala, a good number of persons preferred Malayalam to Tamil and English.

## Subjects opted for studies after 'Plus Two’

Excluding $82.30 \%$ (31920) of persons who did not have any chance to study up to Plus Two level, among the others, more respondents opted for Science subjects (2.96\% -1148), followed by Engineering subjects (2.11\%817), commerce ( $2.04 \%-793$ ) and other subjects included in professional courses $(1.23 \%-478)$.

In this age group (16-25), very small percentage of people chose medicine in comparison with Engineering. Females showed more preference for Commerce, Science, Arts, Literature and medicine than males in this age group. But, higher percentage of males opted for Engineering than females.
$26-35$ years: Women showed more interest in science, arts and literature, men showed more interest in Engineering and ITI trades.

## Preferred Education Institutions

The preference of the respondents was found to be in the order of State-aided institutions ( $39.92 \%$ ), followed by State unaided institutions (10.28\%), State Government institutions (5.35\%), CBSC ( $0.65 \%$ ) and ICSE ( $0.17 \%$ ).

5-15 years: State aided institutions were chosen by more persons of this age group in the Thoothoor Forane. Sexwise differences were not much with regard to the selection of educational institutions by the members of this age group.
16-25 years: In the sex-wise analysis it was noted that females were more in percentage in the preference of all the three types institutions such as State Aided, State unaided and State Government.
26-35 years: The elders preferred state aided institutions during their study time. In the sex-wise analysis it was noted that females were slightly less in percentage in the preference of all the three types institutions such as State Aided, State unaided and State Government.

## Employment and Career Sectors and positions

The sectoral picture of employment of the respondents was found very disheartening with very high percentage of the unemployed ( $66.47 \%$ ) and those employed were not in recognizable and rewarding positions.
18-25 years: Among them the simple majority of $51.39 \%$ of people were jobless. Of the remaining, the largest section was fish workers $(26.10 \%)$ with a huge proportion of men ( $25.75 \%$ ) and a small proportion of women (0.35\%).

29-35 years: Among them a large section (30.18\%) of people was jobless. Of the remaining, the largest section was fish workers $(26.10 \%)$ with a huge proportion of men ( $25.75 \%$ ) and a very small proportion of women ( $0.35 \%$ ). 36-60 years:

## Diseases

It can be noted that the widely spread illnesses were life style diseases. Other diseases were also found in smaller numbers of respondents. Majority (56\%) did not report of any disease.

In the age-wise distribution of population, it was found that Dengue/CG and Asthma were the prominent diseases found among people of younger age, while rheumatic, diabetic and BP were prominent among the older age groups. Similarly, in the earlier age groups, more boys were affected by the disease; in the middle age, it was more women found more unhealthy due to various diseases; but, among the senior citizens, females were found healthier than males.

## Bad habits

Alcohol consumption (10.66\%) and betel leaf chewing (8.12\%) were found as the major bad habits.
In the age group of 5-15 years, a vast majority of the children (99.74\%) were free from any of the listed bad habits. It was, however, alarming to note that 22 children, with 11 girls and 11 boys had one or more of the listed bad habits.

The percentage of people who had bad habits increased with the increase in age.
The percentage of people who had developed bad habits increased steeply from the earlier age group from 4.10\% to $36.08 \%$ with difference of 31.98 percentage points.

Considering that this is the most productive age group, more number of them becoming addicted to serious bad habits which may invite life style diseases like cancer is a case for concern.

Except in betel leaf chewing, males outnumbered females in bad habits.
Alcohol consumption and betel leaf chewing and smoking were found to be the major bad habits the people of the forane had. Mostly male members were affected by them. The bad habits increased with increase in age.

## Disabilities

The data showed that only $4.68 \%$ of the respondents had one or the other of the disabilities. Among those who had any of the disabilities, the higher proportion was those having partial vision (1.88\%).

## Involvement in Church and other social organizations

A vast majority of persons ( $80.78 \%$ ) did not have any association with faith-based or the listed social organizations.
Among the members of the age group above 60 years, $74.91 \%$ of members were not involved in the activities of the faith-based or social organizations listed in the survey. Of the remaining, the largest section (13.24\%) of respondents with more females $(8.87 \%)$ than males $(4.37 \%)$ was members of pious associations.

## FAITH LIFE OF INDIVIDUALS

## Participation in Holy Mass, catechism classes and Sacrament of Reconciliation

The majority ( $64.43 \%$ ) of respondents used to go for Holy Mass on a weekly basis. only $24.67 \%$ regularly went for catechism, while $10.83 \%$ (4193) never went. $34.39 \%$ (13339) of the total respondents occasionally went for the sacrament of confession. A substantial percentage of persons ( $30.50 \%$ ) went for yearly confession. 1635 (4.22\%) never went for the sacrament of confession. Only $11.50 \%$ (4462) went for monthly confession.

## DISCUSSIONS AND RECOMMENDATIONS

In this part, a brief discussion on the topics covered in the survey is included to add some insights to the readers and ordinary users of the materials. In general, three broad areas were covered by the survey: Social sectors, economic sectors and pastoral sectors. In the social sectors, education, health and civic sense were included. In economic sectors, land, home, livelihood, assets, spending habits and debts were included. In the pastoral sectors, participation in Holy Mass, Catechism classes and Sacrament of Reconciliation were the major aspects covered. There were some cross cutting subjects such as bad habits which are related to health and pastoral aspects; some are related to health and civic sense such as use of drainage and disposal of waste. A close analysis and understanding of the findings show that among the socio-economic subjects which cover the major part of the survey, almost all the subjects, excluding those in pastoral sectors, were causally related to education. Education-employment-income triangle is at the root of the situations related to other subjects. Therefore, our discussion establishes a causal relationship between education and other socio-economic factors.

Homelessness and landlessness are the first points of discussion in the survey. Taken together as the two sides of a single problem, land and house ownerships are causally related to each other. These problems have a direct relationship with sustainable income, which may come from regular and decent employment which is normally related to higher education and higher skills.

Almost all important indicators of socio-economic development of families such as employment, education, income, spending and saving habits, debts, asset base, family-based financial planning and auditing are mutually and causally related. These relationships are very often complex in such a manner that one is unable to solve a single problem in isolation from other problems. They require to be addressed in a comprehensive manner.

Persisting deprivations of various kinds such as lack of quality education and employable skills, large scale unemployment, low levels of education, irregular and low income from low profiles of employment and labour, absence of income from any other sources, lack of the habit of saving for the future, larger scales of debts, spending on bad habits and extremely low levels of other asset bases prevented large number of families from owning their home and land, educating their children, providing medical treatment and care to their wards, advocating for higher causes, involving in faith-based and social organizations, getting periodical trainings and awareness on many of the issues which haunt the society such as waste disposal and environment pollution.

The next points included a number of other economic factors such as Home appliances, Ownership of fishing Assets, other occupational equipments, agriculture, trade and commerce and spending pattern. In all these areas, majority of the families are backward with low income and meager assets.

An assessment of prevalence of debts and their extent was also made in this report. Debts are negative factors pulling the poor back again in their struggles for progress.

Poor knowledge and lack of positive attitude and determination to achieve can be attributed to the lack of ration cards and similar important citizen cards. The consequences of this situation are serious in the life of a family since ration cards are approved identity cards for many purposes with regard to economic and educational benefits.

Though this APL-BPL categorization for understanding economic status was included in the survey in Thoothoor Forane, the data collected present un-matching figures. This may have happened due to the negligence of the respondent families to refer to their ration cards or the investigators made some mistakes in collecting correct data.

Lack of medical insurance among the majority of the families is causally linked to poor knowledge, lack of positive attitude and determination to grow and lack of plan in life.

Considering the density of population and families in the Forane under observation, the sanitation situation is serious.

The available sources of water were considered as of different quality levels and as such had their impact on the health and wellbeing of the users.

Further enquiries are required to ascertain which one is the better and safer source than the other. Since majority of the families used public pipe and bore well as one of their sources of water for domestic purposes, there is a need to examine the quality of water.

Importance of drainage system attached to each household is discussed in the survey. Several families do not have proper drainage facilities.

The data clearly revealed that there was a lack of proper awareness among the families about the need and importance of proper disposal of waste and its impact on their health and environment.
Regarding study facilities given to children, time spent by parents and community support for education, the picture drawn from the data available was not at all encouraging. Family support and community support were not enough to help the children for their studies. One third of the families had students who did not receive any of the mentioned support for their education.
While education was the most important base for the sustainable progress of any family or community, the facilities and support envisaged or provided were the minimum.

On the whole, the data provided on faith life of the families in Thoothoor foronate showed that majority of the families were faithful to their prayer life, possession of Bible and duty to participate in the meetings of Basic Christian Communities.

Unnatural deaths were limited. It was natural that death did not occur during the last three years in a vast majority of the families surveyed. Resilience and capacity to live in difficult situations, rather more nutritious food intake and higher spending on health may be behind this bright picture.
The families in the foronate taken together are weak socially and economically and strong in the projected areas of faith life.

There were 38787 persons covered in the survey from the 8 Parishes. Sector-wise and subject-wise collection of data was carried out with regard to the members.
Thoothoor Forane covering 8 parishes had a total of 38787 persons with 20222 males ( $52.14 \%$ ) and 18565 $(47.86 \%)$ females in 10004 families. This means that the family size was 3.87 in the foronate. Sex ratio was 918. This is highly unfavourable to women and very much lower than that in Kerala State.
It was found that the region had a very large section of people in productive age group of 22-59 (51.65\%). Infants in the age group of $0-5$ constituted of $10.6 \%$ (4096). Utilization of this man power through intelligent and practical strategies is expected to bring in prosperity to the region from the level of mediocre socio-economic situations.

It was noted that the percentage of seminarians/aspirants was less than that of the priests/nuns. The trend shows the decline in vocations.

The reasons for the higher rates of the unemployed persons in the foronate could be found in this statistics. Substantial numbers did not have any education. Many students did not reach the eligible levels for gainful employment. The educated ones were merely in formal general education levels. Technically and professionally educated persons were numerically very much limited.
Education was found to be closely related to unemployment. People were, generally, unemployed because they did not have proper qualifying education. Only very small percentage of educated persons did not have a good employment.
Higher the education level, the chances of getting employment.
If the data can be relied on, it is disturbing to note that very small percentage of people in the vital age group were associated with social and faith-based organizations in the Forane. This has implications on their social life, development of social capital and church-based social involvements, which are necessary for personal and social development.
Since membership, association or affiliation of a person with any of the social or faith-based organizations is considered as a sign of faithfulness towards the Church, civic sense, social contacts and proactive personality, the vast majority of persons ( $80.78 \%$ ) without such associations is a case for concern.

Long term, scientific, participatory, committed and collective attempts to address the above negative situations, most of which were internal to the individuals, families and communities are required to progress towards sustainable
development. It should be a gradual planned process on the basis of the available data which is the latest possible source of information.

## Suggestions for action

- All the children capable of learning shall be enrolled at the appropriate age in schools accessible to the families according to their existing financial and other conditions. Lack of good education is at the root of the low profile of employments and low income.
- Parental and family attention and support to children for their studies shall be ensured through regular community-linked initiatives which are possible through parish level programs. A child's education is not merely a family's concern, but it is a social concern and the community has a role to play.
- At the same time, committed efforts shall be taken and sustained to enhance the quality of teaching and formation in schools through building up the capabilities of teachers.
- Special programs in schools to attend to the students with learning difficulties.
- Higher education shall be promoted and encouraged with special programs and individual attention to students in higher classes.
- Career guidance programs shall be designed and implemented at High School, Higher secondary and College levels for helping students and their parents to chose the appropriate courses.
- Technical and professional education shall be promoted among the talented students.
- Special programs shall be designed to prevent drop outs from schools and colleges.
- Parish level and Forane level education monitoring committees shall be formed to take stock of the progress and the Archdiocese shall be alert to ensure the system functioning.
- Information on the availability and possibility of employment opportunities shall be made accessible to prospective job aspirants in the parishes. The prospective job aspirants shall be trained and motivate to access and follow up the source of information on job opportunities, eligibility conditions, time to apply, application processes, potential benefits, time taken to process the applications, recruiting authority and its legal status, the things to remember while preparing applications for jobs, dispatch details, etc
- Labourers in the unorganized sector shall be organized and trained to manage their income judiciously in favour of their families' progress and development, to upgrade their existing skills, to be responsible in their jobs, to be aware of their rights and to avoid spending on unnecessary and unhealthy items.
- People opting for other countries for employment and labour shall be trained to secure jobs with optimum expenses and time. They also need to be sensitized on the potential dangers of illegal and fraudulent ways.
- Social security schemes shall be implemented for those in the private and unorganized sectors. They shall be helped to access information on the existing programs.
- A kind of employment exchange at the parish levels and or forane levels shall be started to take stock of the employment and labour situations affecting the job aspirants.
- An ongoing campaign shall be initiated to promote thrift and saving habits for special purposes like house construction and or land purchase. This shall include continuous coaching in family budgeting and monthly family finance auditing.
- Entrepreneurship and business management shall be promoted among the persons with right attitude and aptitude.
- Special financial schemes involving the community shall be initiated to help people to build up necessary assets like land and house together with assets for livelihood.
- Effective linkages may be made with Panchayat and Government schemes with regard to land and house in view of resource mobilization.
- Families who are strengthened with own houses and land shall be encouraged to support the landless and homeless by supporting them to build up their existing assets, business and other source of legal income.
- Building up on the opportunity of availability of Church land to live on and the good heartedness of the friends and relatives who accommodated several homeless families, community-based support can be mobilized to help the homeless and the landless.
- The use-pattern of different energy sources showed that the level of awareness about energy and its sources, impact on climate change and sustainable development and impact on family expenditure was very low. Programs and projects to enhance environmental and energy awareness shall be linked to spiritual and ecclesiastical goals. Energy clubs, nature clubs and similar forms of organized action may be formed and linked with Catechism programs, youth programs, pious associations and the like.
- A regular yearly PARISH DAY for environment and energy may be celebrated with Holy Mass, seminars, workshops, surveys, competitions and public meetings involving all parishes in the foronate.
- Parish Priests and members of Parish councils shall be trained in environment issues and approaches and strategies to manage them at the forane and parish levels.
- The state and Central Government Ministries and Departments dealing with energy and environment may be linked with the programs at the local and regional levels for resource mobilization.
- Civic awareness campaign for the promotion of reading and access to world and national affairs may be the right response to this situation.
- It is recommended that at least poor families shall be trained to prepare and follow family budgets. Further probing is required to understand why the poor remained poor and what they did with their income, if they had income from some sources.
- Thrift and credit activities may be strengthened with specified targets in a phased manner.
- Periodical awareness and action campaign at the Parish levels on the need and importance of ration cards may address the problems related to it to a great extent.
- Since the information on APL and BPL is very important for the welfare of the families, further efforts shall be taken in the Forane to collect fresh data on this aspect again and analyze separately.
- Ongoing awareness and action campaign at the Parish levels on social security measures may address the problem of the lack of insurance and other social security measures to a great extent.
- A goal should be set up urgently to make the region under $100 \%$ safe sanitation cover at the forane level. Special schemes linking all important stakeholders may be designed and implemented on a time-bound manner. Stakeholders may include local bodies and government institutions.
- A community awareness and action program for testing water samples may be introduced in collaboration with the existing scientific laboratories for testing water.
- Ongoing awareness and action campaign at the Parish level on the need for safe drainage attached to their houses may address this problem to a great extent in the long term. This should be done in collaboration with local bodies and Government.
- Special and urgent efforts (awareness, action, and advocacy) should be taken to prevent the habit of dumping waste into sea and lake which are precious sources of livelihood and life.
- A serious community action program to promote education by ensuring supports to students may be implemented urgently and sustained further on an ongoing basis.
- The positive picture depicted here need to be sustained and improved with deliberate and continuous programs for the promotion of family prayer, reading bible and participation in BC C meetings, since greater challenges are already visible in this regard.
- The fact that murders and suicides did take place, even though in a very small scale, within the communities calls for better precautions and plans to prevent them.
- Frequent blood testing camps with awareness campaigns may reduce the number of non-tested persons for blood.
- The finding calls for special schemes for widows to support them as persons with dignity and self respect.
- In addition to the ideas suggested for enhancing the economic and education status, it is also important to address the issue of unemployment among the people of the region with specific programs. Since most of the unemployed persons are adults and uneducated, institutions like community colleges and skill development centers for functional vocational and entrepreneurial skills shall be promoted and such persons shall be encouraged to take up such courses.
- Special packages for the promotion of English Medium education together with Tamil shall be designed with the support of the Parishes.
- Forane level English medium schools may enhance the number of students opting for English medium.
- Women showed more interest in science, arts and literature, men showed more interest in Engineering and ITI trades. This trend is a positive one and so shall be promoted with more facilities, accessibility and support.
- Programs shall be designed to enhance the quality of education in state-aided institutions.
- Life style diseases may be addressed through life style education, physical exercises, changing food habits, systematic medication and Dhyana.
- Social capital formation shall be promoted through empowering existing organizations and encouraging people to join and work with them.
- Only more than half of the individual members were found to be honoring the obligations of faith life to a great extent with majority going for Holy Mass, Catechism classes and confession. The situation, however, needs to be monitored and emerging challenges shall be addressed with innovative projects and programs.

This chapter ends here with some suggestions for sustaining the strengths, addressing the weaknesses and transforming the opportunities and managing the threats through participatory and collective exercises. Miracles may not happen until people, families, communities and the Archdiocese decide to work untiringly with added determination, commitment and sacrifice.

ANNEXURE 1 Tables

| 1. OWNERSHIP OF HOUSES |  |  |  |  |  |  |  |

    2 Cf. Joseph G. Frenandez, 'Maribiliya Maulikapurarekha' Kollam Khristanikal Rosario A. J.ed. (Kottayam: Pellassery Publications,1995)109. 3 Cf. J.M.Villavarayan, The Docese of Kottar AReview of Its Growth (Nagercoil: the Doicese of Kottar, 1956), 14.

[^1]:    7 Schurhammer, Francis Xavier, pp 117-8.
    8 The information in the above paragraph was collected by an interview with John Rajapan, one of the earliest students in the madam
    in 20-29/12/2007 by the writer himself. I was an attendant for classes in the madam in my childhood.
